## 2-CHANNEL SWITCHING REGULATOR

### FEATURES

- Complete PWM Power Control Circuitry
- Under-Voltage Lockout (UVLO) Protection
- Open Drain Output
- Output Short Circuit Protection
- Low Dissipation Current : 1.6mA
- Dead-Time Control : 0 % to 100%
- Wide Operating Frequency :  
10kHz to 800kHz
- $V_{DD}$  Range : 4.0V to 14.0V

### PIN CONFIGURATION

### GENERAL DESCRIPTION

The AAT1341 provides an integrated two-channel pulse-width-modulation (PWM) solution for the power supply of DC-DC system; this device offers system engineers the flexibility to tailor-make the power supply circuitry for specific applications. Each channel contains its own error amplifier, PWM comparator, dead-time control (DTC), and output driver. The under-voltage protection, oscillator, short circuit protection and voltage reference circuit are the common features of the two channels.

Both channels of AAT1341 can be used for DC-DC converter operations including step-up, step-down, and inverting. Dead-time control can be set to provide 0% to 100% dead-time through a resistive divider network. Soft-start can be implemented by paralleling the DTC resistor with a capacitor. Two dead-time control inputs are assigned for CH1 and CH2 individually, and dead-time control inputs can be used to control on / off operation.

With a minimal number of external components, the AAT1341 offers a simple and cost effective solution.
