AK632256AW
262,144 x 32 Bit CMOS/BiCMOS
Static Random Access Memory

DESCRIPTION

The Accutec AK632256AW SRAM Module consists of eight fast high performance SRAMs mounted on a low profile, 64 pin SIM PCB. The module utilizes four 28 pin 256K x 4 SRAMs in 300 mil SOJ packages and four decoupling capacitor chips mounted on each side of a printed circuit board.

The SRAMs used have common I/O functions and single output enable functions. Also, four separate chip select (\overline{CE}) connections are used to independently enable the four bytes. The modules can be supplied in a variety of access time values from 12 nSEC to 45 nSEC in CMOS or BiCMOS technology.

The Accutec module is designed to have a maximum seated height of 0.600 inch to provide for the lowest height off the board. By off-set-mounting the back surface SRAMs the module can be mounted in either angled or straight-up SIM sockets. The modules conform to JEDEC standard sizes and pin-out configurations. Using two pins for module memory density identification, PD₀ and PD₁, minimizes interchangeability and design considerations when changing from one module size to another in customer applications.
