

Typical Applications

- 3V CDMA/AMPS Cellular Handsets
- 3V CDMA2000/1X Cellular Handsets
- Spread-Spectrum Systems
- Designed for Compatibility with Qualcomm Chipsets

Product Description

The RF3100-2 is a high-power, high-efficiency linear amplifier module targeting 3V hand-held systems. The device is manufactured on an advanced Gallium Arsenide Heterojunction Bipolar Transistor (HBT) process, and has been designed for use as the final RF amplifier in dual-mode 3V CDMA/AMPS hand-held digital cellular equipment, spread-spectrum systems, and other applications in the 824MHz to 849MHz band. The RF3100-2 has a digital control line for low power application to reduce the current drain. The device is self-contained with 50Ω input and output that is matched to obtain optimum power, efficiency, and linearity characteristics. The module is an ultra-small 6mmx6mm land grid array with backside ground.

Package Style: LGM (6mmx6mm)

Features

- Input/Output Internally Matched @ 50Ω
- Single 3V Supply
- 28dBm Linear Output Power
- 29dB Linear Gain
- 45mA Idle Current

Pin	Function	Description	Interface Schematic
1	VCC1	First stage collector supply. A low frequency decoupling capacitor (e.g., 4.7 μ F) is required.	
2	RF IN	RF input internally matched to 50 Ω . This input is internally AC-coupled.	
3	VREG	Regulated voltage supply for amplifier bias. In Power Down mode, both V _{REG} and V _{MODE} need to be LOW (<0.5V).	
4	VMODE	For nominal operation (High Power Mode), V _{MODE} is set LOW. When set HIGH, devices are turned off to improve efficiency.	
5	VCC2	Output stage collector supply. A low frequency decoupling capacitor (e.g., 4.7 μ F) is required.	
6	RF OUT	RF output internally matched to 50 Ω . This output is internally AC-coupled.	
7	GND	Ground connection. Connect to package base ground. For best performance, keep traces physically short and connect immediately to ground plane.	
Pkg Base	GND	Ground connection. The backside of the package should be soldered to a top side ground pad which is connected to the ground plane with multiple vias. The pad should have a short thermal path to the ground plane.
