24	/RD(E)	When connected to an 8080 MPU, it is active LOW. This pad is connected to the RD signal of the 8080MPU, and the NT7532 data bus is in an output status when this signal is "L" When connected to a 6800 Series MPU, this is active HIGH. This is used as an enable clock input of the 6800 series MPU
