

May 2000

#### 1.0 Features

- On-chip tunable voltage-controlled crystal oscillator circuitry (VCXO) allows precise system frequency tuning (pull range typically 300ppm)
- Uses inexpensive fundamental-mode crystals
- Integrated phase-locked loop (PLL) multiplies VCXO frequency to the higher system frequencies needed
- 3.3V or 5V supply voltage available
- Small circuit board footprint: (8-pin 0.150" SOIC)
- Custom frequency selections available contact your local AMI Sales Representative for more information

### **Figure 1: Pin Configuration**

## 2.0 Description

The FS6130 is a monolithic CMOS clock generator IC designed to minimize cost and component count in digital video/audio systems.

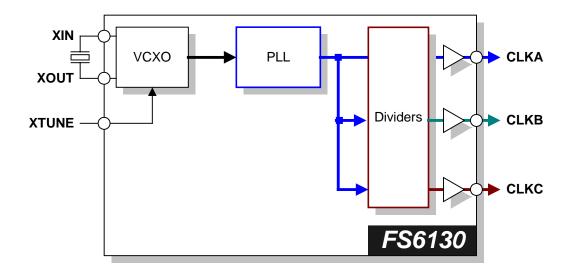

A high-resolution phase-locked loop generates three output clocks through an array of post-dividers. All frequencies are ratiometrically derived from the crystal oscillator frequency. The locking of all the output frequencies together can eliminate unpredictable artifacts in video systems and reduce electromagnetic interference (EMI) due to frequency harmonic stacking.

**Table 1: Font Information** 

DEVICE	VDD	F <sub>XIN</sub> (MHz)	CLKA (MHz)	CLKB (MHz)	CLKC (MHz)
FS6130-03	5V	13.500	54.000	13.500	27.000

NOTE: Contact AMI for custom versions

#### **Table 2: Pin Descriptions**

Key: Al = Analog Input; AO = Analog Output; DI = Digital Input; DI $^{U}$  = Input with Internal Pull-Up; DI $_{D}$  = Input with Internal Pull-Down; DIO = Digital Input/Output; DI-3 = Three-Level Digital Input, DO = Digital Output; P = Power/Ground; # = Active Low pin

PIN	TYPE	NAME	DESCRIPTION		
1	Al	XIN	VCXO Crystal Feedback		
2	Р	VDD	Power Supply (+3.3V or +5V) – see Version Information		
3	Al	XTUNE	VCXO Tune		
4	Р	VSS	Ground		
5	DO	CLKA	Clock Output		
6	DO	CLKB	Clock Output		
7	DO	CLKC	Clock Output		
8	AO	XOUT	VCXO Crystal Drive		

## 3.0 Functional Block Description

### 3.1 Phase-Locked Loop (PLL)

The on-chip PLL is a standard frequency- and phase-locked loop architecture. The PLL multiplies the reference oscillator to the desired frequency by a ratio of integers. The frequency multiplication is exact with a zero synthesis error.

# 3.2 Voltage-Controlled Crystal Oscillator (VCXO)

The VCXO provides a tunable, low-jitter frequency reference for the rest of the FS6109 system components. Loading capacitance for the crystal is internal to the FS6109. No external components (other than the crystal resonator itself) are required for operation of the VCXO.

Continuous fine-tuning of the VCXO frequency is accomplished by varying the voltage on the XTUNE pin. The total change (from one extreme to the other) in effective loading capacitance is t.b.d. nominal.

The oscillator operates the crystal resonator in the parallel-resonant mode. Crystal warping, or the "pulling" of the crystal oscillation frequency, is accomplished by altering the effective load capacitance presented to the crystal by the oscillator circuit. The actual amount that changing the load capacitance alters the oscillator frequency will be dependent on the characteristics of the crystal as well as the oscillator circuit itself.

Specifically, the motional capacitance of the crystal (usually referred to by crystal manufacturers as  $C_1$ ), the static capacitance of the crystal ( $C_0$ ), and the load capacitance ( $C_L$ ) of the oscillator determine the "warping" or "pulling" capability of the crystal in the oscillator circuit.

A simple formula to obtain the warping capability of a crystal oscillator is:

$$\Delta f(ppm) = \frac{C_1 \times (C_{L2} - C_{L1}) \times 10^6}{2 \times (C_0 + C_{L2}) \times (C_0 + C_{L1})}$$

where  $C_{L1}$  and  $C_{L2}$  are the two extremes of the applied load capacitance.

EXAMPLE: A crystal with the following parameters is used. With  $C_1$  = 0.02pF,  $C_0$  = 5pF,  $C_{L1}$  = 10pF, and  $C_{L2}$  = 22.66pF, the tuning range is

$$\Delta f = \frac{0.02 \times (22.66 - 10) \times 10^6}{2 \times (5 + 22.66) \times (5 + 10)} = 305 \, ppm \,.$$

## 4.0 Electrical Specifications

## **Table 3: Absolute Maximum Ratings**

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. These conditions represent a stress rating only, and functional operation of the device at these or any other conditions above the operational limits noted in this specification is not implied. Exposure to maximum rating conditions for extended conditions may affect device performance, functionality, and reliability.

PARAMETER	SYMBOL	MIN.	MAX.	UNITS
Supply Voltage (V <sub>SS</sub> = ground)	$V_{DD}$	V <sub>SS</sub> -0.5	7	V
Input Voltage, dc	Vı	V <sub>SS</sub> -0.5	V <sub>DD</sub> +0.5	V
Output Voltage, dc	Vo	V <sub>SS</sub> -0.5	V <sub>DD</sub> +0.5	V
Input Clamp Current, dc (V <sub>I</sub> < 0 or V <sub>I</sub> > V <sub>DD</sub> )	I <sub>IK</sub>	-50	50	mA
Output Clamp Current, dc (V <sub>I</sub> < 0 or V <sub>I</sub> > V <sub>DD</sub> )	Іок	-50	50	mA
Storage Temperature Range (non-condensing)	Ts	-65	150	°C
Ambient Temperature Range, Under Bias	T <sub>A</sub>	-55	125	°C
Junction Temperature	TJ		125	°C
Lead Temperature (soldering, 10s)			260	°C
Input Static Discharge Voltage Protection (MIL-STD 883E, Method 3015.7)			2	kV

#### **CAUTION: ELECTROSTATIC SENSITIVE DEVICE**

Permanent damage resulting in a loss of functionality or performance may occur if this device is subjected to a high-energy electrostatic discharge.

#### **Table 4: Operating Conditions**

PARAMETER	SYMBOL	CONDITIONS/DESCRIPTION	MIN.	TYP.	MAX.	UNITS
Supply Voltage (3.3 volt system)	$V_{DD}$	SEE NOTE 1	3.0	3.3	3.6	V
Supply Voltage (5.0 volt system)	$V_{DD}$	SEE NOTE 1	4.5	5.0	5.5	V
Ambient Operating Temperature Range	T <sub>A</sub>	SEE NOTE 1	0		70	°C
Crystal Resonator Frequency	f <sub>XTAL</sub>	Fundamental Mode	5		18	MHz

NOTE 1: These specifications represent generic FS6130 device capability. Device specifications for a particular version (i.e. FS6130-xx) are guaranteed only with the operating voltage and reference frequency specified in Version Information.
