..... Engineered solutions for the transient environment

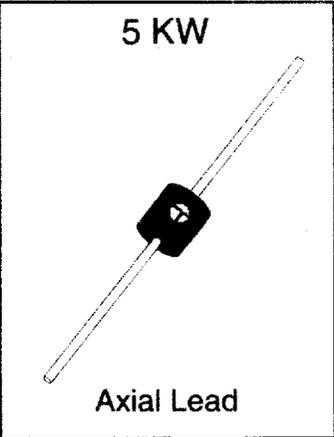

TVS
Transient Voltage
Suppressors
5KP50
thru
5KP110A

DESCRIPTION

This specification sheet defines a series of 5kW Silicon Transient Suppressors used in applications where large voltage transients can permanently damage voltage sensitive components. TVS diodes are Silicon PN junction devices designed for absorption of high voltage transients. This series is available from 5.0 volts thru 110 volts with 5 percent and 10 percent tolerances. Both are referenced to the power supply output or operating voltage level. Special voltages are available from the factory.

TVS diodes are characterized by their high surge capability, extremely fast response time, and low impedance, (R_{ON}). Because of the unpredictable nature of transients and the variation of the impedance with respect to these transients, impedance, per se, is not a specified parametric value. However, a minimum voltage (V_{BR}) at low current conditions and a maximum clamping voltage (V_C) at a maximum peak pulse current is specified. In some instances, the thermal effect (see V_C Clamping Voltage) may be responsible for 50 to 70 percent of the observed voltage differential when subjected to high current pulses or severe duty cycles, thus making maximum impedance specification insignificant. Curves depicting clamping voltage vs. various current pulses are available from the factory. Extended power curves vs. pulse time are also available.

This 5kW TVS series has a peak pulse power rating of 5,000 watts for one millisecond and therefore can be used in applications where induced lightning on rural or remote transmission lines present a hazard to electronic circuitry. The response time of TVS clamping action is theoretically instantaneous (1×10^{-12} sec); therefore, they can protect Integrated Circuits, MOS devices, Hybrids, and other voltage-sensitive semiconductors and components. TVSs can also be used in series or parallel to increase the peak power ratings. Contact the factory for parallel matching conditions. This is only one of many series of Transient Voltage Suppressors available from ProTek Devices.

Unidirectional TVS Diodes

FEATURES

- 5,000 watts Peak Power dissipation
- Available in ranges from 5.0V to 110V
- Designed for DC power supply applications
- UL 94V-0 Flammability Classification

MAXIMUM RATINGS

- 5,000 Watts of Peak Pulse Power dissipation at 25°C (see Figure 1)
- Operating and Storage temperatures: -55° to +175°C
- Forward surge rating: 400 amps, 1/120 second at 25°C
- Steady State power dissipation: 8.0 watts $T_L = 75^\circ\text{C}$
- Repetition rate (duty cycle): .05%
- $t_{clamping}$ (0 volts to V_{BR} min): Less than 1×10^{-12} seconds theoretical

MECHANICAL CHARACTERISTICS

- Molded case
- Weight: 4 grams (approximate)
- Positive terminal marked with band
- Body marked with Logo and type number

V_p = 3.5V @ 100A, 8.3 ms sine wave

Note: P = Standard Part, for non-designated parts, contact the factory for minimum order quantity and delivery.
Note 1: A TVS is normally selected according to its Rated Stand-Off Voltage (V_{WM}) which should be equal to or greater than the continuous peak operating voltage level.
Note 2: Bidirectional devices available, contact the factory.

**FIGURE 3
DERATING CURVE**

ABBREVIATIONS & SYMBOLS

- V_{WM}** Rated Stand-Off Voltage: Maximum working (continuous) DC or peak voltage which may be applied over the standard operating temperature range. Note: V_{WM} is a selected device parameter and must be equal to the maximum operating voltage of the line to be protected.
- V_{BR} (min)** Minimum Breakdown Voltage: Minimum avalanche voltage the device will exhibit and is used to assure that conduction does not occur prior to the voltage at 25°C.
- V_C** Maximum Clamping Voltage: Maximum peak voltage appearing across the TVS when subjected to the peak pulse current in a 20 µs time interval. The peak pulse voltage is the combination of voltage rise due to both the series resistance and the thermal rise.
- I_{pp}** Peak Pulse Current - See Figure 2
- P_p** Peak Pulse Power - See Figure 1
- I_D** Standby-Current
- I_T** Test Current
- Device Selection:** A TVS diode is normally selected according to the Rated Standoff voltage (V_{WM}) which should be equal to or greater than the DC or continuous peak operating voltage level.
