

# Sensitive SCRs (0.8 – 10 Amps)

## General Description

The Teccor Electronics, Inc. line of sensitive SCR semiconductors are half-wave unidirectional gate-controlled rectifiers (SCR-thyristor) which complement Teccor's line of power SCRs. This group of packages offers ratings of 0.8-10 amps, and 50-600 volts with gate sensitivities of 12-500 microamps. If gate currents in the 10-50 milliamp ranges are required, please consult Teccor's non-sensitive SCR technical data sheets.

## Electrically Isolated Packages

This group of Teccor sensitive SCRs is available in a choice of three different product packages. The TO-220AB and TO-92 are electrically isolated where the case or tab is internally isolated to allow the use of low cost assembly and convenient packaging techniques.

## Glass Passivation

Teccor's line of SCRs features glass-passivated junctions to ensure long term device reliability and parameter stability. Teccor's glass offers a rugged, reliable barrier against junction contamination.

Tape-and-reel packaging is available for the TO-92 package. Please consult factory for more information.

Variations of devices covered in this data sheet are available for custom design applications. Please consult the factory for more information.

## Features

- Electrically-isolated To-220AB package
- High Voltage Capability up to 600 Volts
- High Surge Capability — up to 100 Amps
- Glass Chip Passivation

## General Notes

- Teccor 2N5060 and 2N6564 Series devices conform to all JEDEC registered data. See specifications table on page 5-2.
- The case temperature ( $T_C$ ) is measured as shown on dimensional outline drawings. See "Package Dimensions" section of this catalog.
- All measurements (except  $I_{GT}$ ) are made with an external resistor  $R_{GK} = 1k\Omega$  unless otherwise noted.
- All measurements are made at 60Hz with a resistive load at an ambient temperature of  $+25^\circ C$  unless otherwise specified.
- Operating temperature ( $T_J$ ) is  $-65^\circ C$  to  $+110^\circ C$  for "EC" Series devices;  $-65^\circ C$  to  $+125^\circ C$  for "2N" Series devices;  $-40^\circ C$  to  $+125^\circ C$  for "TCR" Series; and  $-40^\circ C$  to  $+110^\circ C$  for all others.
- Storage temperature range ( $T_S$ ) is  $-65^\circ C$  to  $+150^\circ C$  for TO-92 devices;  $-40^\circ C$  to  $+150^\circ C$  for TO-202 devices; and  $-40^\circ C$  to  $+125^\circ C$  for all others.
- Lead solder temperature is a maximum of  $+230^\circ C$  for 10 seconds maximum  $\geq 1/16"$  (1.59mm) from case.

## Electrical Specification Notes

- See Figures 5.1 through 5.9 for current ratings at specified operating case temperatures.
- See Figure 5.10 for  $I_{GT}$  vs  $T_C$ .
- See Figure 5.11 for instantaneous on-state current ( $I_T$ ) vs on-state voltage ( $v_T$ ) - (typical).
- See Figure 5.12 for  $V_{GT}$  vs  $T_C$ .
- See Figure 5.13 for  $I_H$  vs  $T_C$ .
- For more than one full cycle, see Figure 5.14.

- 0.8 - 4.0A devices also have a pulse peak forward current on-state rating (repetitive) of 75A. This rating applies for operation at 60Hz,  $75^\circ C$  maximum tab (or anode) lead temperature, switching from 80V peak, sinusoidal current pulse width of 10 $\mu s$  minimum, 15 $\mu s$  maximum. See Figures 5.20 and 5.21.
- See Figure 5.15 for  $I_{gt}$  vs  $I_{GT}$ .
- Test conditions as follows:  
 $T_C \leq 80^\circ C$ , rectangular current waveform; rate-of-rise of current  $\leq 10A/\mu s$ . Rate-of-reversal of current  $\leq 5A/\mu s$ .  $I_{TM} = 1A$  (50 $\mu s$  pulse). Repetition Rate = 60pps.  $V_{RRM} =$  Rated.  $V_R = 15V$  minimum,  $V_{DRM} =$  Rated. Rate-of-rise reapplied forward blocking voltage = 5V/ $\mu s$ . Gate Bias = 0V, 100 $\Omega$  (during turn-off time interval).
- Test condition is maximum rated RMS current except TO-92 devices are 1.2A<sub>PK</sub>; T106/T107 devices are 4A<sub>PK</sub>.
- $V_D = 6VDC$ ,  $R_L = 100\Omega$ . See Figure 5.19 for simple test circuit for measuring gate trigger voltage and gate trigger current.
- See Figures 5.1 through 5.9 for maximum allowable case temperature at maximum rated current.
- $I_{GT} = 500\mu A$  maximum for  $T_C = -40^\circ C$  for T106 devices.
- $I_H = 10mA$  maximum for  $T_C = -65^\circ C$  for 2N5060 Series and 2N6564 Series devices.
- $I_H = 6mA$  maximum for  $T_C = -40^\circ C$  for T106 devices.
- Pulse Width  $\leq 10\mu s$ .
- $I_{GT} = 350\mu A$  maximum at  $T_C = -65^\circ C$  for 2N5060 Series and 2N6564 Series devices.
- Latching current can be higher than 20mA for higher  $I_{GT}$  types. Also latching current can be much higher at  $-40^\circ C$ . See Figure 5.18.
- $T_C = T_J$  for test conditions in off-state.

## General Notes

- Teccor 2N5060 and 2N6564 Series devices conform to all JEDEC registered data. See specifications table on page 5-2.
- The case temperature ( $T_C$ ) is measured as shown on dimensional outline drawings. See "Package Dimensions" section of this catalog.
- All measurements (except  $I_{GT}$ ) are made with an external resistor  $R_{GK} = 1k\Omega$  unless otherwise noted.
- All measurements are made at 60Hz with a resistive load at an ambient temperature of  $+25^\circ C$  unless otherwise specified.
- Operating temperature ( $T_J$ ) is  $-65^\circ C$  to  $+110^\circ C$  for "EC" Series devices;  $-65^\circ C$  to  $+125^\circ C$  for "2N" Series devices;  $-40^\circ C$  to  $+125^\circ C$  for "TCR" Series; and  $-40^\circ C$  to  $+110^\circ C$  for all others.

- Storage temperature range ( $T_S$ ) is  $-65^\circ C$  to  $+150^\circ C$  for TO-92 devices;  $-40^\circ C$  to  $+150^\circ C$  for TO-202 devices; and  $-40^\circ C$  to  $+125^\circ C$  for all others.
- Lead solder temperature is a maximum of  $+230^\circ C$  for 10 seconds maximum  $\geq 1/16"$  (1.59mm) from case.

## **Electrical Specification Notes**

- (1) See Figures 5.1 through 5.9 for current ratings at specified operating case temperatures.
  - (2) See Figure 5.10 for  $I_{GT}$  vs  $T_C$ .
  - (3) See Figure 5.11 for instantaneous on-state current ( $i_T$ ) vs on-state voltage ( $v_T$ ) - (typical).
  - (4) See Figure 5.12 for  $V_{GT}$  vs  $T_C$ .
  - (5) See Figure 5.13 for  $I_H$  vs  $T_C$ .
  - (6) For more than one full cycle, see Figure 5.14.
  - (7) 0.8 - 4.0A devices also have a pulse peak forward current on-state rating (repetitive) of 75A. This rating applies for operation at 60Hz, 75°C maximum tab (or anode) lead temperature, switching from 80V peak, sinusoidal current pulse width of 10μs minimum, 15μs maximum. See Figures 5.20 and 5.21.
  - (8) See Figure 5.15 for  $t_{gt}$  vs  $I_{GT}$ .
  - (9) Test conditions as follows:  
 $T_C \leq 80^\circ\text{C}$ , rectangular current waveform; rate-of-rise of current  $\leq 10\text{A}/\mu\text{s}$ . Rate-of-reversal of current  $\leq 5\text{A}/\mu\text{s}$ .  $I_{TM} = 1\text{A}$  (50μs pulse)  
Repetition Rate = 60pps.  $V_{RRM}$  = Rated.  
 $V_R = 15\text{V}$  minimum,  $V_{DRM}$  = Rated. Rate-of-rise reapplied forward

$V_R = 15V$  minimum,  $V_{DRM}$  = Rated. Rate-of-rise reapplied forward

blocking voltage =  $5V/\mu s$ . Gate Bias = 0V,  $100\Omega$  (during turn-off time interval).

- (10) Test condition is maximum rated RMS current except TO-92 devices are  $1.2A_{PK}$ ; T106/T107 devices are  $4A_{PK}$ .
  - (11)  $V_D = 6VDC$ ,  $R_L = 100\Omega$ . See Figure 5.19 for simple test circuit for measuring gate trigger voltage and gate trigger current.
  - (12) See Figures 5.1 through 5.9 for maximum allowable case temperature at maximum rated current.
  - (13)  $I_{GT} = 500\mu A$  maximum for  $T_C = -40^\circ C$  for T106 devices.
  - (14)  $I_H = 10mA$  maximum for  $T_C = -65^\circ C$  for 2N5060 Series and 2N6564 Series devices.
  - (15)  $I_H = 6mA$  maximum for  $T_C = -40^\circ C$  for T106 devices.
  - (16) Pulse Width  $\leq 10\mu s$ .
  - (17)  $I_{GT} = 350\mu A$  maximum at  $T_C = -65^\circ C$  for 2N5060 Series and 2N6564 Series devices.
  - (18) Latching current can be higher than 20mA for higher  $I_{GT}$  types. Also latching current can be much higher at  $-40^\circ C$ . See Figure 5.18.
  - (19)  $T_C = T_J$  for test conditions in off-state.

## Electrical Isolation

Teccor's isolated sensitive SCRs will withstand a minimum high potential test of 2500 VAC RMS from leads to mounting tab over the device's operating temperature range. See table below for other standard and optional isolation ratings.

ELECTRICAL ISOLATION FROM LEADS TO MOUNTING TAB	
VAC(RMS)	
2500	Standard
4000	Optional*

\*For 4000V Isolation use "V" Suffix in part number

\*\*UL Recognized File #E71639

**Note:** V1 — 0-10 volt DC meter  
 VGT — 0-1 volt DC meter  
 $I_G$  — 0-1mA DC millimeter  
 R1 — 1K potentiometer

To measure gate trigger voltage and current, raise gate voltage ( $V_{GT}$ ) until meter reading  $V_1$  drops from 6 volts to 1 volt. Gate trigger voltage is the reading on  $V_{GT}$  just prior to  $V_1$  dropping. Gate trigger current  $I_{GT}$  can be computed from the relationship:

$$I_{GT} = I_G - \frac{V_{GT}}{1000} \text{Amps}$$

where  $I_G$  is reading (in amps) on meter just prior to V1 dropping.

**Note:**  $I_{GT}$  may turn out to be a negative quantity (trigger current flows out from gate lead).
