

# PRECISION 3.3 VOLT LOW KNEE CURRENT VOLTAGE REFERENCE

## ISSUE 3 - MARCH 1998

# ZRC330

### DEVICE DESCRIPTION

The ZRC330 uses a bandgap circuit design to achieve a precision micropower voltage reference of 3.3 volts. The device is available in small outline surface mount packages, ideal for applications where space saving is important.

The ZRC330 design provides a stable voltage without an external capacitor and is stable with capacitive loads. The ZRC330 is recommended for operation between  $20\mu A$  and  $5mA$  and so is ideally suited to low power and battery powered applications.

Excellent performance is maintained to an absolute maximum of  $25mA$ , however the rugged design and 20 volt processing allows the reference to withstand transient effects and currents up to  $200mA$ . Superior switching capability allows the device to reach stable operating conditions in only a few microseconds.

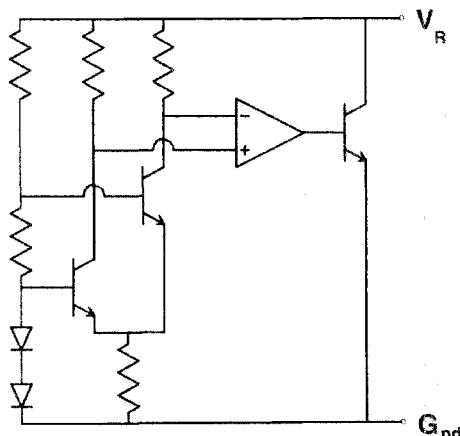

### FEATURES

- Small outline SOT23, SO8 and TO92 style packages
- No stabilising capacitor required
- Low knee current,  $15\mu A$  typical

### APPLICATIONS

- Battery powered and portable equipment.
- Metering and measurement systems.
- Instrumentation.
- Test equipment.
- Data acquisition systems.
- Precision power supplies.
- Crystal oscillators
