No. V-7437

Messrs.

SPECIFICATION

Model: XFPM-050KPG(R)-P3

RoHS compliance

Project:

Reference:

Fujikura Ltd.

1. General;

This document details the performance specifications of FUJIKURA's **XFPM-050KPG(R)-P3** high level output, on-chip signal conditioned, temperature compensated and calibrated pressure transducers.

2. Principle;

FUJIKURA's integrated semiconductor pressure sensor has four pressure sensitive piezoresistors which are formed on the diaphragm surface of a silicon chip. This chip includes a constant current drive circuit, signal amplification circuitry and resistors for calibration of offset and sensitivity and temperature compensation. These are achieved using silicon planer technique.

When the applied pressure deforms the diaphragm, the piezoresistors change their resistance due to the piezoresistance effect. The resistance change of the four resistors, which constitute a Wheatstone bridge circuit, results in a pressure proportional voltage because there is an internally supplied constant current excitation. The surrounding circuit then amplifies the low-level voltage to provide a linear, repeatable high-level output voltage.

Table shown below is revision records of this specification

3. Pressure range & rating;

Model	Rated (Measurable) pressure range
XFPM-050KPG(R)-P3	0 ~ +300 mmHg·Gauge (0 ~ +40.00 kPa·Gauge)

4. Package outline dimensions, Electrical pin connections, Marking and Weight;

Refer the attached drawings.

The following table shows the drawing No.

Model	Package outline dimensions	Electrical pin connections	Marking
XFPM-050KPG-P3	No.9-751-044	No.9-751-048	No.9-751-076
XFPM-050KPGR-P3	No.9-751-045	No.9-751-048	No.9-751-076

Weight	approximately 1.2g
--------	--------------------

5. Absolute maximum rating;

Item	Symbol	Rating	Unit
Maximum load pressure	Pmax+	Twice of rated pressure	
Maximum input voltage	Vccmax	8	VDC
Compensated temperature range	Topt1	0 ~ 50	
Operating temperature range	Topt2	-40 ~ 125	
Storage temperature range	Tstg	-40 ~ 125	
Insulation durability	-	AC500V, 1minute.	
Insulation impedance	-	100M min. (DC500V)	

6. Recommended operating conditions;

Item	Symbol	Condition	Unit
Rated pressure	Popt	0 ~ +300 (0 ~ +40.00)	mmHg (kPa)
Type of pressure	-	Gauge pressure	
Pressure media	-	Non-corrosive gases	
Supply Voltage (const.)	Vcc	5.0 ± 0.25	VDC

7. Electrical characteristics; (Vcc=5VDC constant, ambient temperature Ta =25)

Item	Symbol	Rating	Note
Power consumption	Icc	10 mA max. (typ 7mA)	
Output impedance	Imp	10 max.	
Source current	Isource	0.2 mA max.	
Sink current	Isink	2 mA max.	
Offset voltage (Output at 0mmHg)	Voff	0.5 ± 0.1 V	1
Output voltage at full scale (Output at 300mmHg)	Vfs	4.0 ± 0.1 V	1
Output span voltage	SV	1.75 ± 0.05 V (0 - 150mmHg) 3.50 ± 0.10 V (0 - 300mmHg)	1
Output span error at 150mmHg	SVErr150	± 2.0mmHg/0 - 50	1, 2
Output span error at 300mmHg	SVErr300	± 2.5mmHg/0 - 50	1, 3
Maximum Temperature Error	TCErrMax	± 0.2 V/0 - 50	1, 4
Nonlinearity	NL	± 0.4%FS/0 - 50	5
Response time	Tr	1 ms. typ.	6
Noise screening		0.033mmHg p-p (for the detail, please refer to page 4)	(A)

- Notes;**
- 1) The error excludes the ratio metric effect of changes in input voltage.
 - 2) Output Span Error at 150mmHg is defined as deviations of the 150mmHg output span voltage at 0 and 50 °C referenced to 150mmHg output span voltage at 25 °C.
 - 3) Output Span Error at 300mmHg is defined as deviations of the 300mmHg output span voltage at 0, 25 and 50 °C referenced to twice of 150mmHg output span voltage at 25 °C.
 - 4) Maximum output error of all over the temperature range 0 to 50 °C.
 - 5) Nonlinearity is evaluated at 150mmHg from the best straight line goes from 0mmHg through 300mmHg over the temperature range 0 to 50 °C.
 - 6) Response time is defined as the time for the change in output voltage from 10% to 90% of its final value when the input pressure make a step change.

8. Transfer Function;

$$V_{out} = V_s \times (P \times \text{Sensitivity} + \text{Offset}) \pm (\text{Pressure Error} \times \text{Temperature Error Multiplier} \times V_s)$$

Vs : 5Volts.

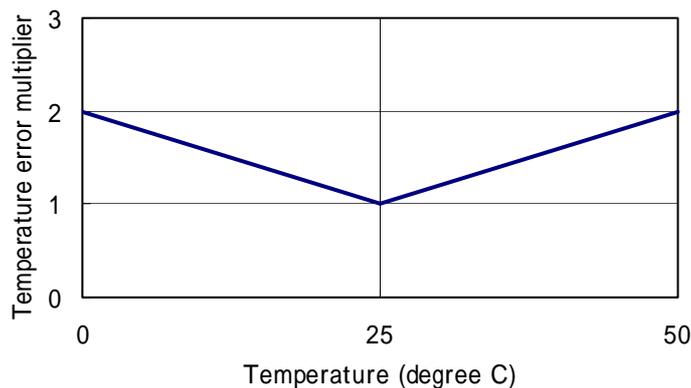

Note: Out put Vout is not perfectly ratiometric with power supply voltage Vs.

P : Input Pressure

Pressure Error and Temperature error multiplier are shown below.

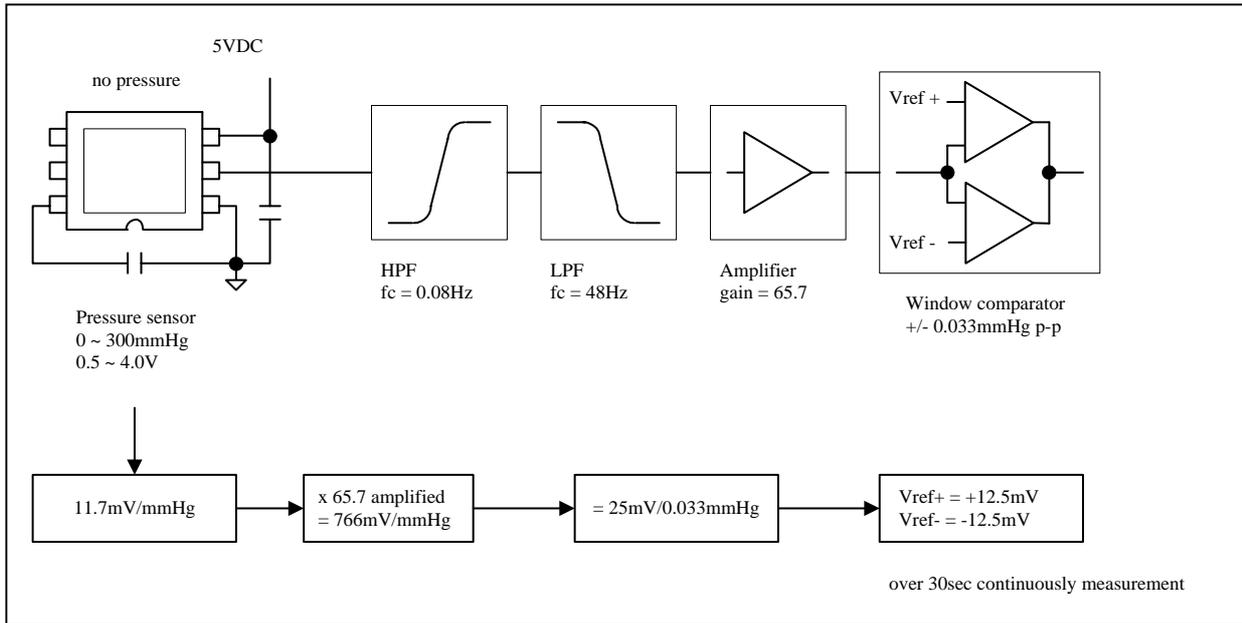

Model	Pressure Range	Pressure Error	Temperature Error Multiplier	Pressure Error (1) (mmHg)
XFPM-050KPG(R)-P3	0 - +300mmHg	0.00233	0.1	8.57

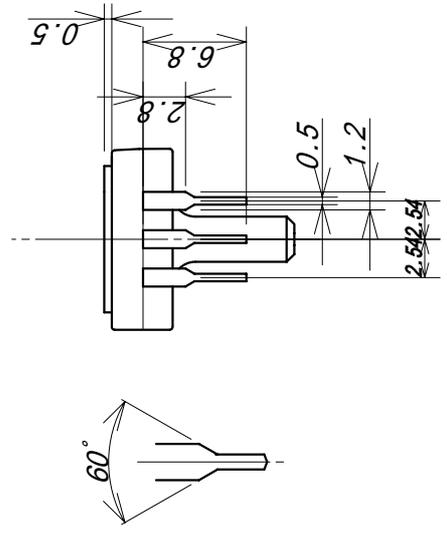

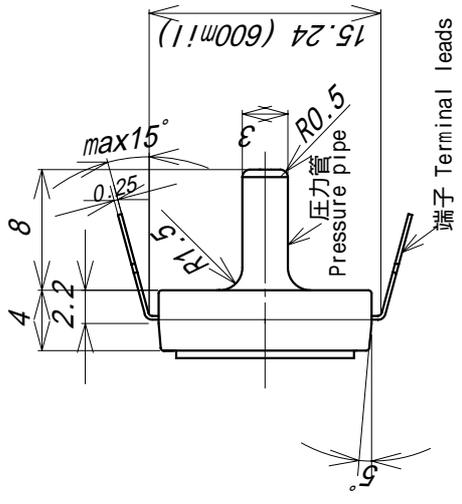

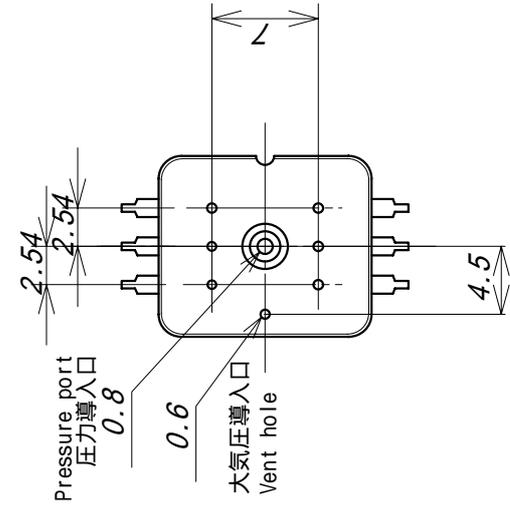

- 1) Pressure error includes Non-linearity, pressure hysteresis, span calibration error and offset calibration error at room temperature.
- 2) Temperature Error Multiplier is shown below graph.

- 3) Output Span Error at 150mmHg over the temperature range 0 to 50 °C is within +/-2.0mmHg.
And Output Span Error at 300mmHg over the temperature range 0 to 50 °C is within +/-2.5mmHg.

8. Noise screening; (A)

K.Nuri	R.Nagano
設計 DESIGNED BY	製図 DRAWN BY
T.Adachi	T.Adachi

PART NO.	部品名	材質	個数	摘要
	NAME OF PART	MAT'L	QTY.	REMARKS
PROJECT NAME :				
第3角法	名称 TITLE	Connection Diagram		
3RD ANGLE PROJECTION	XFGM/N			
単位 UNITS	尺度 SCALE	図面番号 DRAWING NO.		
mm	m.m	9-757-003		
DATE OF ISSUE	DATE OF DESIGN	REV. MARK		
01/29/98	01/29/98	B		

インデックス / Index

#1126
XFGM*
050P3

ロット Lot No.

1126

年 Year

0 : 2000y, 1 : 2001y, 2 : 2002y

月 Month

1~9 : Jan. ~ Sep., X : Oct., Y : Nov., Z : Dec.
(10月) (11月) (12月)

日 Day

01 ~ 31 : 1st ~ 31th

*#: to identify a model for 250degC reflow soldering

without *#: for 230degC reflow soldering

3: XFGM-3

6: XFGM-6

◇	to identify a model for 250degC soldering	2007/8/17	H.N
◇	Specify of sensor type for XFGM-3 or XFG-6	2006/12/07	H.N
