## TEST CONFIGURATIONS

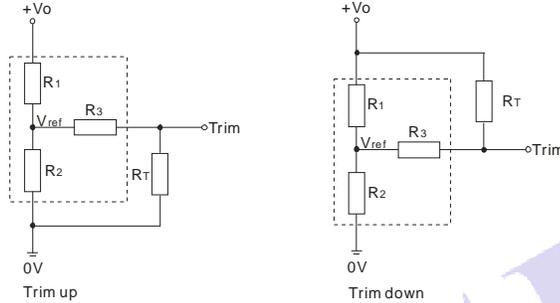

### Input Reflected-Ripple Current Test Setup

Input reflected-ripple current is measured with an inductor  $L_{in}$  and  $C_{in}$  to simulate source impedance.

## TRIM APPLICATION & TRIM RESISTANCE

Application circuit for TRIM (Part in broken line is the interior of models)——Single output models

### Formula for resistance of Trim

$$\begin{aligned} \text{up: } R_T &= \frac{aR_2}{R_2-a} - R_3 & a &= \frac{V_{ref}}{V_o' - V_{ref}} \cdot R_1 \\ \text{down: } R_T &= \frac{aR_1}{R_1-a} - R_3 & a &= \frac{V_o' - V_{ref}}{V_{ref}} \cdot R_2 \end{aligned}$$

Note: Value for  $R_1$ ,  $R_2$ ,  $R_3$ , and  $V_{ref}$  refer to the following table.

$R_T$ : Resistance of Trim

$a$ : User-defined parameter, no actual meaning.

$V_o'$ : The trim up/down voltage

$V_o$	3.3(VDC)	5(VDC)	9(VDC)	12(VDC)	15(VDC)	24(VDC)
Parameter						
$R_1(K\Omega)$	4.801	2.883	7.5	10.971	14.497	24.872
$R_2(K\Omega)$	2.863	2.864	2.864	2.864	2.864	2.864
$R_3(K\Omega)$	15	10	15	17.8	17.8	20
$V_{ref}(V)$	1.24	2.5	2.5	2.5	2.5	2.5

## DESIGN & APPLY CONSIDERATIONS

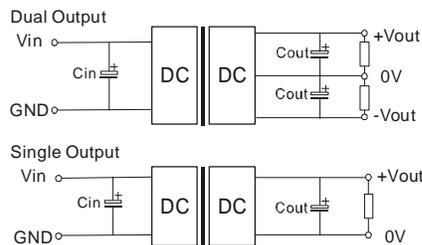

### 1) Requirement on output load

To ensure this module can operate efficiently and reliably, During operation, the minimum output load **could not be less than 10% of the full load**. If the actual output power is very small, please connect a resistor with proper resistance at the output end in parallel to increase the load.

### 2) Recommended circuit

All the VRA\_LD-15W & VRB\_LD-15W series have been tested according to the following recommended testing circuit before leaving factory. This series should be tested under load. Never be tested under no load (see Figure 3).

If you want to further decrease the output ripple, you can increase capacitance properly or choose capacitors with low ESR. However, the capacitance can't exceed the maximum capacitor load in the list (Table 1).

(Figure 3)

EXTERNAL CAPACITOR TABLE (TABLE 1)

Output Voltage	Capacitance	Cout( $\mu$ F)	Cin( $\mu$ F) (12V,24V, 48V input)
Single	3.3V,5V	470	100
	9V,12V,15V	220	
	24V	100	
Dual	$\pm$ 5V	220	
	$\pm$ 9V, $\pm$ 12V, $\pm$ 15	100	
	$\pm$ 24V	47	

3) No parallel connection or plug and play

Note:

1. The load shouldn't be less than 10%, otherwise ripple will increase dramatically. Operation under minimum load will not damage the converter; However, they may not meet all specification listed, and that will reduce the life of product.
2. Max. Capacitive Load tested at nominal input voltage, full load and constant resistive load.
3. All specifications measured at Ta=25°C, humidity<75%, nominal input voltage and rated output load unless otherwise specified.
4. In this datasheet, all the test methods of indications are based on corporate standards.
5. Only typical models listed, other models may be different, please contact our technical person for more details.
6. Our company offer custom products.
7. Specifications subject to change without notice.
