Quadrac

Internally Triggered Triacs (4 A to 15 A)

General Description

Teccor's *Quadrac* devices are triacs that include a diac trigger mounted inside the same package. This device, developed by Teccor, saves the user the expense and assembly time of buying a discrete diac and assembling in conjunction with a gated triac. Also, the alternistor *Quadrac* device (QxxxxLTH) eliminates the need for a snubber network.

The *Quadrac* device is a bidirectional AC switch and is gate controlled for either polarity of main terminal voltage. Its primary purpose is for AC switching and phase control applications such as speed controls, temperature modulation controls, and lighting controls where noise immunity is required.

Triac current capacities range from 4 A to 15 A with voltage ranges from 200 V to 600 V. *Quadrac* devices are available in the TO-220 package.

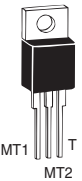

The TO-220 package is electrically isolated to 2500 V rms from the leads to mounting surface. 4000 V rms is available on special order. This means that no external isolation is required, thus eliminating the need for separate insulators and insulator-mounting steps and saving dollars over "hot tab" devices.

All Teccor triac and diac chips have glass-passivated junctions to ensure long-term device reliability and parameter stability.

Variations of devices in this data sheet are available for custom design applications. Consult the factory for more information.

Features

- Glass-passivated junctions
- Electrically-isolated package
- Internal trigger diac
- High surge capability — up to 200 A
- High voltage capability — 200 V to 600 V

Specific Test Conditions

$[\Delta V_{\pm}]$ — Dynamic breakback voltage (forward and reverse)

ΔV_{BO} — Breakover voltage symmetry

C_T — Trigger firing capacitance

di/dt — Maximum rate-of-change of on-state current

dv/dt — Critical rate-of-rise of off-state voltage at rated V_{DRM} gate open

$dv/dt(c)$ — Critical rate-of-rise of commutation voltage at rated V_{DRM} and $I_{T(RMS)}$ commutating $di/dt = 0.54$ rated $I_{T(RMS)}$ /ms; gate unenergized

I^2t — RMS surge (non-repetitive) on-state current for period of 8.3 ms for fusing

I_{BO} — Peak breakover current

I_{DRM} — Peak off-state current gate open; V_{DRM} = maximum rated value

I_{GTM} — Peak gate trigger current (10 μs Max)

I_H — Holding current; gate open

$I_{T(RMS)}$ — RMS on-state current, conduction angle of 360°

I_{TSM} — Peak one-cycle surge

t_{gt} — Gate controlled turn-on time

V_{BO} — Breakover voltage (forward and reverse)

V_{DRM} — Repetitive peak blocking voltage

V_{TM} — Peak on-state voltage at maximum rated RMS current

General Notes

- All measurements are made at 60 Hz with resistive load at an ambient temperature of $+25^\circ C$ unless otherwise specified.
- Operating temperature range (T_J) is $-40^\circ C$ to $+125^\circ C$.
- Storage temperature range (T_S) is $-40^\circ C$ to $+125^\circ C$.
- Lead solder temperature is a maximum of $+230^\circ C$ for 10 seconds maximum; $\geq 1/16"$ (1.59 mm) from case.
- The case temperature (T_C) is measured as shown on dimensional outline drawings. See "Package Dimensions" section of this catalog.

Electrical Specification Notes

- For either polarity of MT2 with reference to MT1
- See Figure E3.1 for I_H versus T_C .
- See Figure E3.4 and Figure E3.5 for i_T versus v_T .
- See Figure E3.9 for surge ratings with specific durations.

- (5) See Figure E3.6, Figure E3.7, and Figure E3.8 for current rating at specific operating temperature.
- (6) See Figure E3.2 and Figure E3.3 for test circuit.
- (7) $\Delta V_{BO} = [+ V_{BO}] - [- V_{BO}]$
- (8) See Figure E3.7 and Figure E3.8 for maximum allowable case temperature at maximum rated current.
- (9) Trigger firing capacitance = 0.1 μ F with 0.1 μ s rise time
- (10) $T_C = T_J$ for test conditions in off state
- (11) Maximum required value to ensure sufficient gate current
- (12) See package outlines for lead form configurations. When ordering special lead forming, add type number as suffix to part number.

Electrical Isolation

All Teccor isolated *Quadrac* packages withstand a minimum high potential test of 2500 V ac rms from leads to mounting tab over the operating temperature range of the device. The following isolation table shows standard and optional isolation ratings.

Electrical Isolation from Leads to Mounting Tab *	
V AC RMS	TYPE
2500	Standard
4000	Optional **

* UL Recognized File #E71639

**For 4000 V isolation, use "V" suffix in part number.

Thermal Resistance (Steady State) $R_{\theta JC}$ [$R_{\theta JA}$] $^\circ\text{C/W}$ (TYP)	
TYPE	Isolated TO-220
