### Introduction

The HM 65787 is a high speed CMOS static RAM organized as 65536 × 1 bit. It is manufactured using TEMIC's high performance CMOS technology.

Access times as fast as 15 ns are available with maximum power consumption of only 495 mW.

The HM 65787 features fully static operation requiring no external clocks or timing strobes. The automatic power-down feature reduces the power consumption by 60 % when the circuit is deselected.

Easy memory expansion is provided by an active low chip select ( $\overline{CS}$ ) and three state drivers.

All inputs and outputs of the HM 65787 are TTL compatible and operate from single 5V supply thus simplifying system design.

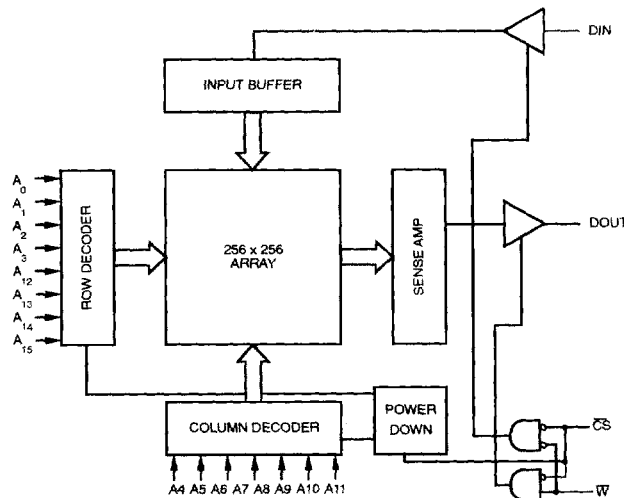

The HM 65787 is processed following the test methods of MIL STD 883.
