

μ PD1723GF-013, μ PD1723GF-213

PLL FREQUENCY SYNTHESIZER AND CONTROLLER FOR FM/MW/LF TUNER (CAR AUDIO)

The μ PD1723GF-013 and μ PD1723GF-213 are CMOS LSI developed for worldwide PLL frequency synthesizer FM/MW/LW tuner use.

Their package is a 64-pin QFP. On-chip PLL frequency synthesizer, controller, 200 MHz prescaler, LCD driver, and IF counter allow the construction of a compact FM/MW/LW tuner with a high-performance clock for high-end car stereo and home stereo sets.

FEATURES

- Worldwide FM/MW banks and European LW band can be received.
- Abundant tuning functions, including manual tuning, autotuning (seek, scan), and preset memory scan
- Six buttons, independent preset memories for 18 FM stations (FM1, FM2, FM3; 6 stations each), 12 MW stations (MW1, MW2; 6 stations each), 6 LW stations, and VF band
- FM: 3, MW: 2, LW: 1, VF: 1 last channel memories
- VF broadcast station (traffic information) autotuning (SK signal search) and DK standby function
- MONO (MONORAL) and LOC (LOCAL/DX) control output and display
- "ST" (STEREO) display
- MTL (METAL), NR₁ (NOISE REDUCTION), NR₂, and AMS (AUTO MUSIC SEARCH) control output and display
- Auto preset memory function
- "CD" (Compact Disk) display
- LOUD (LOUDNESS) control output and display
- 12 hour and 24 hour clock display function (no clock display also possible)
- Single 5 V \pm 10 % power supply
- On-chip prescaler (200 MHz max. $V_{in} = 0.3 V_{P-P}$), IF counter, LCD driver (1/2 duty, 1/2 bias drive, frame frequency (100 Hz))

ORDERING INFORMATION

Order Code	Package	Quality Grade
μ PD1723GF-011-3BE	64-pin plastic QFP (14x20)	Standard
μ PD1723GF-211-3KE	64-pin plastic QFP (14x20)	Standard

Please refer to "Quality grade on NEC Semiconductor Devices" (Document number IEI-1209) published by NEC Corporation to know the specification of quality grade on the devices and its recommended applications.

FUNCTIONS

Receiving frequency, channel spacing, reference frequency, intermediate frequency

Area	Item Band	Receiving Frequency	Channel Space	Reference Frequency	Intermediate Frequency
Europe 1	FM	87.500 to 108.00 MHz	50 kHz	25 kHz	10.7 MHz
	MW	522 to 1620 kHz	9 kHz	9 kHz	450 kHz
	LW	144 to 290 kHz	1 kHz	1 kHz	450 kHz
Europe 2	FM	87.500 to 108.000 MHz	50 kHz	25 kHz	10.7 MHz
	MW	522 to 1620 kHz	9 kHz	9 kHz	459 kHz
	LW	144 to 290 kHz	1 kHz	1 kHz	459 kHz
United States 1	FM	87.5 to 108.0 MHz	100 kHz	25 kHz	10.7 MHz
	MW	530 to 1620 kHz	10 kHz	10 kHz	450 kHz
United States 2	FM	87.5 to 107.9 MHz	200 kHz	25 kHz	10.7 MHz
	MW	630 to 1620 kHz	10 kHz	10 kHz	450 kHz
United States 3	FM	87.5 to 107.9 MHz	200 kHz	25 kHz	10.7 MHz
	MW	530 to 1710 kHz	10 kHz	10 kHz	450 kHz
Australia and Middle East	FM	87.5 to 108.0 MHz	100 kHz	25 kHz	10.7 MHz
	MW	531 to 1602 kHz	9 kHz	9 kHz	450 kHz
Japan	FM	76.0 to 90.0 MHz	100 kHz	25 kHz	-10.7 MHz
	MW	522 to 1629 kHz	9 kHz	9 kHz	450 kHz
Central and South America	FM	87.5 to 108.0 MHz	100 kHz	25 kHz	10.7 MHz
	MW	520 to 1620 kHz	5 kHz	5 kHz	450 kHz

RADIO FUNCTIONS

- (1) Manual tuning
 - Manual up }
 - Manual down } Step and fast
- (2) Autotuning
 - Seek up }
 - Seek down } When a broadcast station is detected that frequency is held.
 - Scan up }
 - Scan down } Broadcast station is received every 5 seconds.
- (3) Preset memory scanContents of independent FM, MW and LW preset memories are received every 5 seconds.
- (4) VF autotuning
 - SK seek up }
 - SK seek down } When an SK signal is detected, that frequency is held.
 - SK scan up }
 - SK scan down } Broadcast station with SK signal is received every 5 seconds.

- (5) Preset memory
 - FM bandFM1: 6 stations, FM2: 6 stations, FM3: 6 stations
 - MW bandMW1: 6 stations, MW2: 6 stations
 - LW band.....6 stations
 - VF band6 stations
 - When the LW band is used, MW2 cannot be used.
- (6) Last preset memoryFM1, FM2, FM3, MW1, MW2, LW and VF; 1 station each
- (7) LOC (LOCAL) control output and display (Auto Local Function selection possible)
- (8) FM MONO (MONORAL) control output and display (VF band is same as FM)
- (9) "ST" (STEREO) displayEffective at FM and VF
- (10) Auto preset memory
- (11) DK standby and SK alarm functions

TAPE FUNCTIONS

- (1) Tape direction displayFlashes at 2 MHz at fast forward.
- (2) AMS (AUTO MUSIC SEARCH) control output and display
- (3) MTL (METAL) control output and display
- (4) NR₁ (NOISE REDUCTION) and NR₂ control output and display

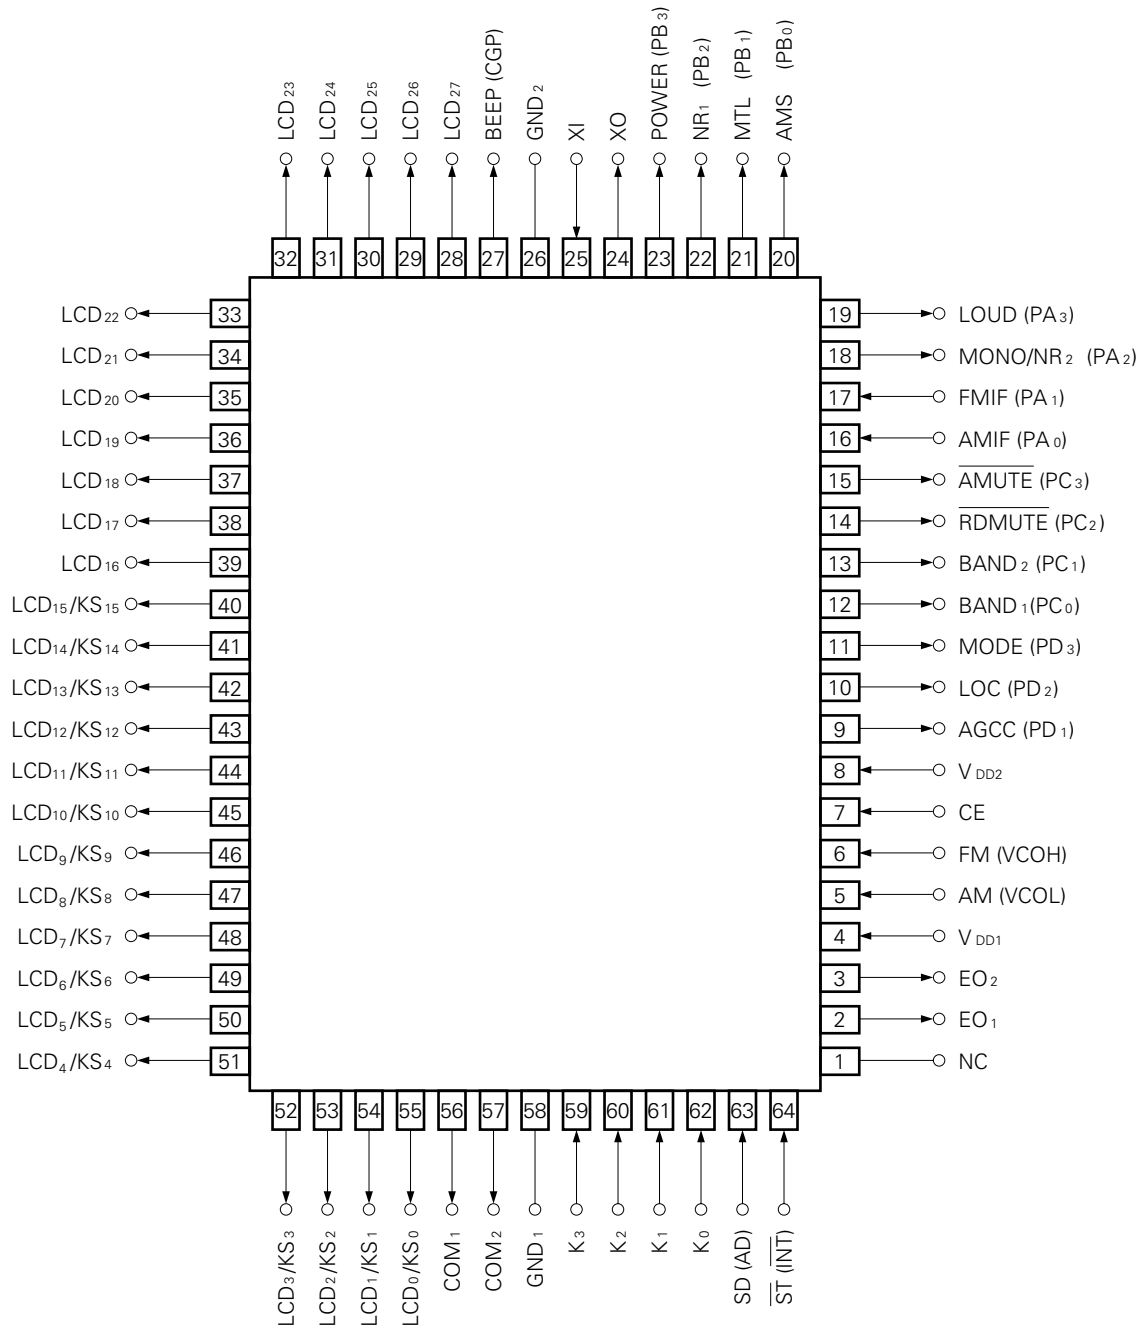

CLOCK FUNCTIONS

- (1) 12 hour clock display (with "AM" and "PM" display) or 24 hour clock display selectable
- (2) Colon (":") flashing (1 Hz) selectable
- (3) In non-clock mode, low consumption current (10 μ A max.) backup possible

OTHERS

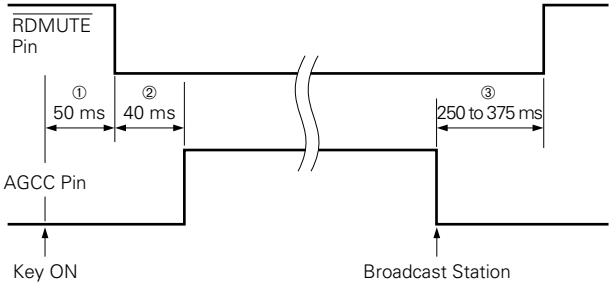

- (1) LOUD (LOUDNESS) control output and displayCommon in radio, tape, and CD modes
- (2) Key acknowledge (BEEP) output (2.25 kHz, 40 ms)Output by effective momentary key
- (3) Display switching and priority display functions
- (4) " " (compact disk) display
- (4) " " (compact disk) display

PIN CONFIGURATION (Top View)

PIN DESCRIPTIONS

PIN No.	SYMBOL	PIN NAME	DESCRIPTION	OUTPUT TYPE
1	NC	No connection	This pin is not connected to the internal chip. Therefore, leave it open or connect it to GND, V _{DD} , etc.	—
2 3	EO ₁ EO ₂	Error out	<p>PLL (Phase Locked Loop) error output pins. When the frequency obtained by dividing the local oscillation frequency (VCO output) is higher than the reference frequency, High level is output from these pins. When it is lower than the reference frequency, Low level is output from these pins. When the two frequencies are the same, these pins are floated.</p> <p>This output is input to an external LPF (Low Pass Filter) and is applied to a varactor diode through the LPF. EO₁ and EO₂ output the same waveform so that the pin to be used can be freely selected. When the radio is OFF, these pins are floated.</p>	CMOS 3-state
4 8	V _{DD1} V _{DD2}	Power supply input	<p>Device power supply input pin.</p> <p>This pin supplies 5 V ±10 % power voltage during device operation (radio, tape, and CD modes). When the diode matrix NOCLK switch is 1 (shorted by diode), when the CE pin (pin 7) is made Low level, this pin drops to 2.5 V and data hold is enabled. When a voltage of 0 → 4.5 V is supplied to this pin, the data is initialized. Supply 0 → 4.5 V to this pin within 500 ms.</p> <p>Always connect pins 4 and 8 to the same potential. V_{DD1} (pin 4) is the analog system (PLL, A/D converter, INT, CE) power supply and V_{DD2} (pin 8) is the digital system (CPU, LCD driver, IF counter) power supply.</p>	—
5	AM	AM local oscillation input	<p>The AM (MW and LW band) local oscillation output (VCO output) is input to this pin. When the radio is turned on and the MW or LW band is received, this pin becomes active. Otherwise, it is pulled down internally.</p> <p>The input amplitude is 0.3 V_{P-P} MIN.</p> <p>Since there is an on-chip AC amplifier, block the DC component with a capacitor.</p>	Input

PIN No.	SYMBOL	PIN NAME	DESCRIPTION	OUTPUT TYPE
6	FM	FM local oscillation input	<p>The FM local oscillation output (VCO output) is input to this pin.</p> <p>When the radio is turned on and the FM band is received, this pin becomes active. Otherwise, it is pulled down internally.</p> <p>The input amplitude is 0.3 V_{P-P} MIN.</p> <p>Since there is an on-chip AC amplifier, block the DC component of the input signal with a capacitor.</p>	Input
7	CE	Chip enable	<p>Device select signal input pin.</p> <p>When the device is operated normally (radio, tape, CD, clock display, etc.), High level is input and when the device is not used, Low level is input.</p> <p>However, High and Low levels of 134 μs or less are not accepted.</p> <p>When this pin is Low level, the radio, tape, CD, and display are turned off and the device enters the data hold state.</p> <p>At this time, data hold at low consumption current (400 nA or less) is possible by setting the NOCLK switch of the diode matrix to be described later to 1 (shorted by diode, no-clock mode).</p>	Input
9	AGCC	AGC cut output	<p>Radio mode AGC (AUTOMATIC GAIN CONTROL) cut signal output pin.</p> <p>During autotuning, the High level shown below is output.</p>  <p>① Key ON Chattering Wait ② Premuting ③ Postmuting</p>	CMOS pushpull

PIN No.	SYMBOL	PIN NAME	DESCRIPTION	OUTPUT TYPE																
10	LOC	Local output	<p>Radio mode LOCAL signal output pin.</p> <p>This pin is valid when the initialize diode AUTOLOC switch is 0.</p> <p>Each time the LOC key is pressed, the LOCAL state is inverted. In the LOCAL state, the LCD panel "LOC" display lights.</p> <p>When autotuning (seek up/down, scan up/down, auto memory) is performed when the "LOC" display is ON, High level is output from this pin. The LOCAL state is common to the FM, VF, MW, and LW bands.</p> <p>When the power is turned on, this pin goes low.</p>	CMOS pushpull																
11	MODE	Mode signal output	<p>Mode switching signal output pin.</p> <p>Its output in each mode is shown below.</p> <table border="1" data-bbox="716 814 1328 1220"> <thead> <tr> <th>Mode</th> <th>MODE</th> </tr> </thead> <tbody> <tr> <td>• CW = Low</td> <td>0</td> </tr> <tr> <td>• CE = High; radio, tape, and CD OFF</td> <td>0</td> </tr> <tr> <td>• Radio mode</td> <td>1</td> </tr> <tr> <td>• Tape mode</td> <td>0</td> </tr> <tr> <td>• CD mode</td> <td>0</td> </tr> <tr> <td>• Tape DK standby • CD DK standby • DK ON</td> <td>1</td> </tr> <tr> <td>• Radio monitor mode</td> <td>1</td> </tr> </tbody> </table> <p style="text-align: right;">0: Low level, 1: High level</p> <p>That is, when the PLL is operated, High level is output from this pin. Therefore, use it to turn the tuner power on and off, etc.</p>	Mode	MODE	• CW = Low	0	• CE = High; radio, tape, and CD OFF	0	• Radio mode	1	• Tape mode	0	• CD mode	0	• Tape DK standby • CD DK standby • DK ON	1	• Radio monitor mode	1	CMOS pushpull

PIN No.	SYMBOL	PIN NAME	DESCRIPTION	OUTPUT TYPE
18	MONO/NR ₂	Monaural and noise reduction output	<p>In the radio mode, this pin operates as the MONORAL signal output pin and in the tape mode, this pin operates as the NOISE REDUCTION signal output pin.</p> <ul style="list-style-type: none"> • Radio mode Each time the MONO key is pressed on the FM and VF bands, the output is inverted. When the device is set to the MONORAL state by MONO key, the LCD panel "MONO" display lights and high level is output from this pin. On the MW and LW bands, this pin becomes low. When the power is turned on, this pin becomes low. • Tape mode This pin is valid when the diode matrix ENNR2 switch to be described later is 1 (shorted by diode). When NOISE REDUCTION NR₂ is selected by pressing the NR key or NOISE REDUCTION function key (selected by diode matrix), high level is output. At this time, the LCD panel "NR₂" display lights. In the radio monitor and DK ON modes, the "MONO" display is inverted and the MONO/NR₂ pin is made MONO output by pressing the MONO key. When the power is turned on, this pin becomes low. 	CMOS pushpull
19	LOUD	LOUD output	<p>LOUDNESS signal output pin. In the radio, tape, and CD modes, the output is inverted each time the LOUD key is pressed. When the LOUDNESS state is selected by LOUD key, the LCD panel "LOUD" display lights and high level is output from this pin. When the power is turned on, this pin becomes low.</p>	CMOS pushpull
20	AMS	AMD signal output	<p>Tape mode AMS (AUTO MUSIC SEARCH) control signal output pin. Its output is inverted each timer the AMS key is pressed. High level is output while the LCD panel "AMS" display is lit.</p>	CMOS pushpull

PIN No.	SYMBOL	PIN NAME	DESCRIPTION	OUTPUT TYPE
21	MTL	Metal output	<p>Tape mode metal signal output pin.</p> <p>Its output is inverted each time the MTL key and METAL function key (selected by diode matrix) is pressed. When the METAL state is selected with these keys, the LCD panel “MTL” display lights and high level is output from this pin.</p> <p>When the power is turned on, this pin becomes low.</p>	CMOS pushpull
22	NR ₁	Noise reduction output	<p>Tape mode noise reduction (NR) signal output pin.</p> <p>When NR₁ is selected by the NR key or NOISE REDUCTION function key (selected by diode matrix), the LCD panel “NR₁” display lights and high level is output from this pin.</p>	CMOS pushpull
23	POWER	Power output	<p>When the CE pin is high level, the output of this pin is inverted each time the POWER key is pressed.</p> <p>When the power is turned on, low level is output.</p> <p>This pin can be used to turn the set power on and off, etc.</p> <p>See 6 “Application Circuits”.</p>	CMOS pushpull
24 25	XO XI	Crystal oscillator	<p>Crystal oscillator connection pin. It connects to a 4.5 MHz crystal oscillator.</p> <p>When the clock function is used, the accuracy of the clock is effected by the oscillation frequency accuracy only.</p> <p>Adjust the oscillation frequency while observing the LCD oscillation waveform and PLL local oscillation frequency.</p>	CMOS (XO) Input (XI)
26 58	GND ₂ GND ₁	Ground	<p>Device ground pins.</p> <p>Remarks Always connect pins 26 and 58 to the same potential.</p> <p>GND₁ (pin 58) is analog system ground and GND₂ is digital system ground.</p>	—

PIN No.	SYMBOL	PIN NAME	DESCRIPTION	OUTPUT TYPE
27	BEEP	Beep output	Beep output pin when momentary key pressed. A 2.25 kHz and 50 % duty square wave is output for approx. 40 ms. This time is equal to the premuting time. When a momentary key is pressed and the state of the LCD panel display or output port is changed (valid key) and at the end of 5 seconds hold during preset memory scan and scan operations, a beep is output. To disable the beep, float (leave open) this pin. The beep output is also used at SK alarm at DK standby.	CMOS pushpull
28 to 39 40 to 55	LCD ₂₇ to LCD ₁₆ LCD ₁₅ /KS ₁₅ to LCD ₀ /KS ₀	LCD segment and key source output	LCD panel segment signal output (pins 28 to 55) and key matrix key source signal output (pins 40 to 55) pins. 56-dot display is performed at the LCD panel by matrix with the COM ₁ pin (pin 56) and COM ₂ pin (pin 57). Since LCD ₁₅ /KS ₁₅ (pin 40) to LCD ₀ /KS ₀ (pin 55) share the key source signal and LCD segment signal, to use them as key source signals, a reverse current prevention diode is necessary. For the connection method, see 1.3 "Key Matrix Connection" and 6 "Application Circuits".	CMOS pushpull
56 57	COM ₁ COM ₂	LCD common signal output	Common signal output to LCD panel. 56-dot display is performed at the LCD panel by matrix with LCD ₂₇ (pin 28) to LCD ₀ /KS ₀ (pin 55).	CMOS pushpull
59 to 62	K ₃ to K ₀	Key return signal input	Key matrix key return signal input pin. Since the key source signal output is shared with the LCD segment signal, do not connect a pull-down resistor to this pin.	Input

PIN No.	SYMBOL	PIN NAME	DESCRIPTION	OUTPUT TYPE																																											
63	SD	SD input	<p>Autotuning SD (Station Detector) signal input pin. 1.2 SWITCH CONNECTION

1.3 KEY MATRIX CONNECTION

1.4 DESCRIPTION OF KEY MATRIX

1.4.1 Initialize Diode Matrix

The initialize diode matrix contains the switches shown below. These switches are read only when power is applied to the V_{DD} pin for the first time (power ON reset) and when the CE pin changed from low level to high level (CE reset). Otherwise, they are ignored.

- (1) Receiving area setting switches
AREA1, AREA2, AREA3
- (2) Receiving band setting switches
DISFM3, ENMW2, DISLW
- (3) Auto memory setting switch
DISAMEMO
- (4) IF counter setting switches
ENFMIF, DISAMIF
- (5) Preset memory operation setting switch
M2S
- (6) Tuning operation setting switch
AUTO500
- (7) Display priority setting switches
PRIO1, PRIO2
- (8) Radio ON/OFF method setting switch
RDON
- (9) Clock function setting switches
NOCLK, CLKDISP, FLASH
- (10) Tape function setting switches
ENTPK, KAMS, KNR, KMTL, ENNR2
- (11) Muting output setting switch
MUTESEL
- (12) Local operation setting switch
AUTOLOCK

Set these switches by shorting them with a diode on the matrix or leave them open. In the following text, 1 signifies shorting by diode and 0 signifies leaving open.

0	Manual tuning only. Each time the key is pressed, the channel is incremented or decremented by one. When the key is held down for more than 0.5 seconds, the channel is changed continuously and rapidly.						
1	Manual tuning and autotuning. Each time the key is pressed, the channel is incremented or decremented by one. When the key is held down for more than 0.5 seconds, autotuning (seek operation) is performed from the next channel.						

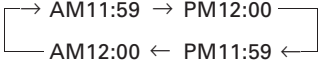

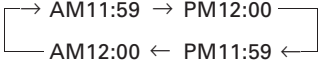

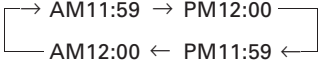

Symbol	Function				
AUTOLOC	<p>Local function setting switch. Its settings are shown below.</p>				
	<table border="1"> <thead> <tr> <th data-bbox="431 296 573 338">AUTOLOC</th> <th data-bbox="573 296 1455 338">Local Function</th> </tr> </thead> <tbody> <tr> <td data-bbox="431 338 573 474">0</td> <td data-bbox="573 338 1455 474"> <p>LOCAL ON/OFF by key input. Each time the LOC key pressed, the "LOC" display is inverted. LOCAL output outputs high level only during autotuning (SEEK, SCAN, AMEMO).</p> </td> </tr> </tbody> </table>	AUTOLOC	Local Function	0	<p>LOCAL ON/OFF by key input. Each time the LOC key pressed, the "LOC" display is inverted. LOCAL output outputs high level only during autotuning (SEEK, SCAN, AMEMO).</p>
	AUTOLOC	Local Function			
0	<p>LOCAL ON/OFF by key input. Each time the LOC key pressed, the "LOC" display is inverted. LOCAL output outputs high level only during autotuning (SEEK, SCAN, AMEMO).</p>				
1	<p>Auto local. The LOC key is invalid. When autotuning is selected by SEEK UP, SEEK DWN, SEEK UP, SEEK DWN, AMEMO keys, the "LOC" display lights and the LOCAL output becomes high and autotuning is performed. When autotuning is performed for one cycle, the device searches in the DX mode ("LOC" display OFF, LOCAL output = Low). However, the device enters the LOCAL1, LOCAL2 or DX mode only during auto memory operation. At other than autotuning, the "LOC" display goes off and the LOCAL output becomes low. If the same key (SEEK UP key for the seek-up operation, etc.) is pressed during autotuning, if the device is in the LOCAL mode, it searches in the DX mode, beginning from the frequency at which autotuning started. If the device is in the DX mode, autotuning stops. When AUTO500 switch is set to "1" (autotuning by pressing MAN UP or MAN DWN key for 0.5 second) when auto local is used, the following operations are performed: Auto local search (LOCAL) mode is performed by pressing the MAN UP or MAN DWN key for more than 0.5 seconds. When the MAN UP or MAN DWN key is pressed again during LOCAL search and the 2nd DX search, autotuning stops.</p>				

Symbol	Function			
PRI01 PRI02	Priority display setting switch. "Priority display" is display that returns to the previous display if no operation is performed within 5 seconds after the display was switched. These switches are valid only when the NOCLK switch is set to 0 (clock mode) when the device is not in the DK standby mode and radio monitor is not used. Their settings are shown below.			
	PRI01 PRI02	PRI01 PRI02	Priority Display	Description
	0	0	None	Display switching is performed when the DISP key and melody selection key (during clock display) was operated. <ul style="list-style-type: none"> • Radio mode The display switches between frequency display and clock display each time the DISP key is pressed. When the melody selection key is pressed during clock display, the display switches to frequency display. • Time mode The DISP key is disabled. • CD mode The display is switched between "L⁻C⁺" display and clock display each time the DISP key is pressed.
1	0	Frequency CD	When the display switched from frequency or "L ⁻ C ⁺ " display to clock display by DISP key, if no operation is performed within 5 seconds, the display returns to the original display. <ul style="list-style-type: none"> • Radio mode Normally the frequency is displayed. The display is switched to 5 seconds clock display by pressing the DISP key. When the DISP key is pressed again, or the melody selection key is pressed, during 5 seconds clock display, the display returns to frequency display. • Tape mode Clock display. The DISP key is invalid. • CD mode Normally "L⁻C⁺" is displayed. The display is switched to 5 seconds clock display by pressing the DISP key. When the DISP key is pressed again during 5 seconds clock display, the display returns to CD display. 	

Symbol	Function		
PRIO1 PRIO2	PRIO1	PRIO2	Priority Display
	0	1	Clock In the radio and CE modes, clock display has priority. • Radio mode Normally the clock is displayed. The display is switched to 5 seconds frequency display by pressing the DISP key or melody selection key. When the DISP key is pressed again during 5 seconds frequency display, the display returns to clock display. • Tape mode The DISP key is invalid. • CD mode Normally the clock is displayed. The display is switched to 5 seconds "i _L □" display by pressing the DISP key. When the DISP key is pressed again during 5 seconds "i _L □" display, the display returns to clock display.
	1	1	—
<p>"Frequency display" in the above means receiving frequency, receiving band, and preset memory display. Therefore, during radio reception, the 'PSCAN', 'SK', 'VF', 'ST', 'MONO', 'LOCAL', and 'LOUD' displays light even at clock display.</p> <p>In the tape mode, the 'LOUD', 'MTL', 'NR1', 'NR2', 'AMS', '▷', and '◁' displays also light at clock display.</p>

Symbol	Function								
ENTPK KAMS KNR KMTL	The operation of each key is the same as that of the momentary keys AMS , NR , and MTL . Summarizing the above, the five keys M1 (TP1) to M3 (TP3) , LOC (TP4) , and MONO (TP5) can be used as tape function keys. Which functions are used in common are determined by the ENTPK, KAMS, KNR and KMTL switches. This is summarized below.								
	ENTPK	KAMS	KNR	KMTL	M1 (TP1)	M2 (TP2)	T3 (TP3)	LOC (TP4)	MONO (TP5)
	0	1 1 1 1 0 0 0 0	1 1 0 0 1 1 0 0	1 0 1 0 1 0 1 0	AMS AMS AMS AMS NR NR MTL	NR NR MTL MTL	MTL		
	1	1 1 1 0 0 0 0	1 1 0 1 1 0 0	1 0 1 1 0 1 0	← Do not set.			AMS AMS AMS NR NR MTL	NR MTL MTL
	When these functions are used, tuning operations in the tape DK standby, CD DK standby and radio monitor, and DK ON modes are restricted as follows:								
	ENTPK	KAMS	KNR	KMTL					
	0	0	0	0	Normal tuning possible.				
	0	When even one switch is 1			Tuning by M1 (TP1) to M6 key is possible.				
	1	— —	— —	— —	The LOC (TP4) and MONO (TP5) keys cannot be used as local and monaural keys.

			MW, LW	SD system
DISAMEMO	Auto preset memory function disable switch. Its settings are shown below.			
	DISAMEMO	Description		
	0	Enables the auto preset memory function. When the <table border="1" data-bbox="646 905 792 947"><tr><td>PSCAN AMEMO</td></tr></table> key is pressed for more than 2 seconds, auto preset memory operation begins.		
PSCAN AMEMO				
1	Disables the auto preset memory function. The <table border="1" data-bbox="646 1031 792 1073"><tr><td>PSCAN AMEMO</td></tr></table> key performs the preset scan function only.			PSCAN AMEMO
PSCAN AMEMO				

1.4.2 Alternate or Transistor Switch

Symbol	Function													
CDSET	<p>CD mode setting switch. This switch is valid only when the CE pin is high level. The CD mode can be set by setting this switch to ON. For details, see 2 "Mode Transition".</p>													
TPSET	<p>Tape mode setting switch. This switch is valid only when the CE pin is high level. When this switch is set to ON when the CSDSET is OFF, the device is set to the tape mode. For details, see 2 "Mode Transition".</p>													
RDSET	<p>Radio mode setting switch. This switch is valid only when the CE pin is high level. When this switch is set to ON when the CDSET and TPSET switches are OFF, the device is set to the radio mode. For details, see 2 "Mode Transition". When using this switch, set the RDON switch (diode matrix) to 0.</p>													
FF	<p>Tape mode fast forward signal input switch. The tape fast forward display (◀▷) lights as shown below according to the state of the RL switch.</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>FF</th> <th>RL</th> <th>Display</th> </tr> </thead> <tbody> <tr> <td rowspan="2">0</td> <td>0</td> <td>◀▷</td> </tr> <tr> <td>1</td> <td>◁▶</td> </tr> <tr> <td rowspan="2">1</td> <td>0</td> <td>◀▷</td> </tr> <tr> <td>1</td> <td>◁▶</td> </tr> </tbody> </table> <p>▷ : Light OFF, ▶ : Light ON, ◁▶ : Flash (2 Hz) 0: OFF, 1: ON</p>	FF	RL	Display	0	0	◀▷	1	◁▶	1	0	◀▷	1	◁▶
FF	RL	Display												
0	0	◀▷												
	1	◁▶												
1	0	◀▷												
	1	◁▶												
SK	<p>VF broadcast station SK signal input switch. When this switch is set to ON on the FM and VF bands, the LCD panel "SK" display lights. On the FM and VF bands, this signal is also used as the auto tuning stop signal. At this time, 250 to 375 ms after the broadcast station is judged to be present by IF and SD pin, this switch is checked and if it is ON, a traffic information station is judged to be present and autotuning stops.</p>													
RL	<p>Tape mode travel direction signal input switch. The tape travel display (◁▷) lights according to the state of the FF switch. For the lighting contents, see the FF switch above.</p>													
DK	<p>VF broadcast station DK signal input switch. When this switch is set to ON in the tape DK standby and CD DK standby modes, the device enters the tape DK ON and CD DK ON mode.</p>													

1.4.3 Momentary Keys

Symbol	Function						
	<p>In the radio mode, these keys are used to call and write preset memory. In the tape mode, these are used as tape function keys by initialize diode (ENTPK, KAMS, KNR, KMTL).</p> <ul style="list-style-type: none"> Radio mode <p>Preset memory call and write keys.</p> <p>One key can memorize the FM1, FM2, FM3, VF, MW1, MW2, and LW bands independently (max. 6 bands).</p> <p>The following operations are performed according to the state of M2S of the initialize diodes:</p> <table border="1" data-bbox="357 556 1380 1932"> <thead> <tr> <th data-bbox="357 556 446 598">M2S</th> <th data-bbox="446 556 1380 598">Description</th> </tr> </thead> <tbody> <tr> <td data-bbox="357 598 446 1354">Write</td> <td data-bbox="446 598 1380 1354"> <p>The device is placed into the 5 seconds preset memory write mode by pressing the ME key during frequency display. Symbol	Function
POWER	<p>This key is used when turning the radio ON and OFF momentary key, controlling the illumination, etc.</p> <p>This key is valid only when the CE pin is High.</p> <p>The POWER pin (pin 23) output is inverted by pressing this key.</p> <p>When using this key, set the RDON switch (diode matrix) to 0.</p> <p>The radio is turned on and off by turning the transistor switch RDON ON and OFF with the output of the POWER pin.</p> <p>For details, see 2 “Mode Transition” and 6 “Application Circuits”.</p>

2. MODE TRANSITION

With the μPD1723GF-013 and μPD1723GF-213, the radio can be turned on and off by the following two methods:

- (i) By CE pin when initialize diode switch RDON = 1
- (ii) By turning the transistor or alternate switch RDSET on and off

The mode transition at each operation is described in **2.1**, **2.2**, and **2.3**.

2.1 WHEN INITIALIZE DIODE RDON = 1 (RADIO ON/OFF BY CE PIN)

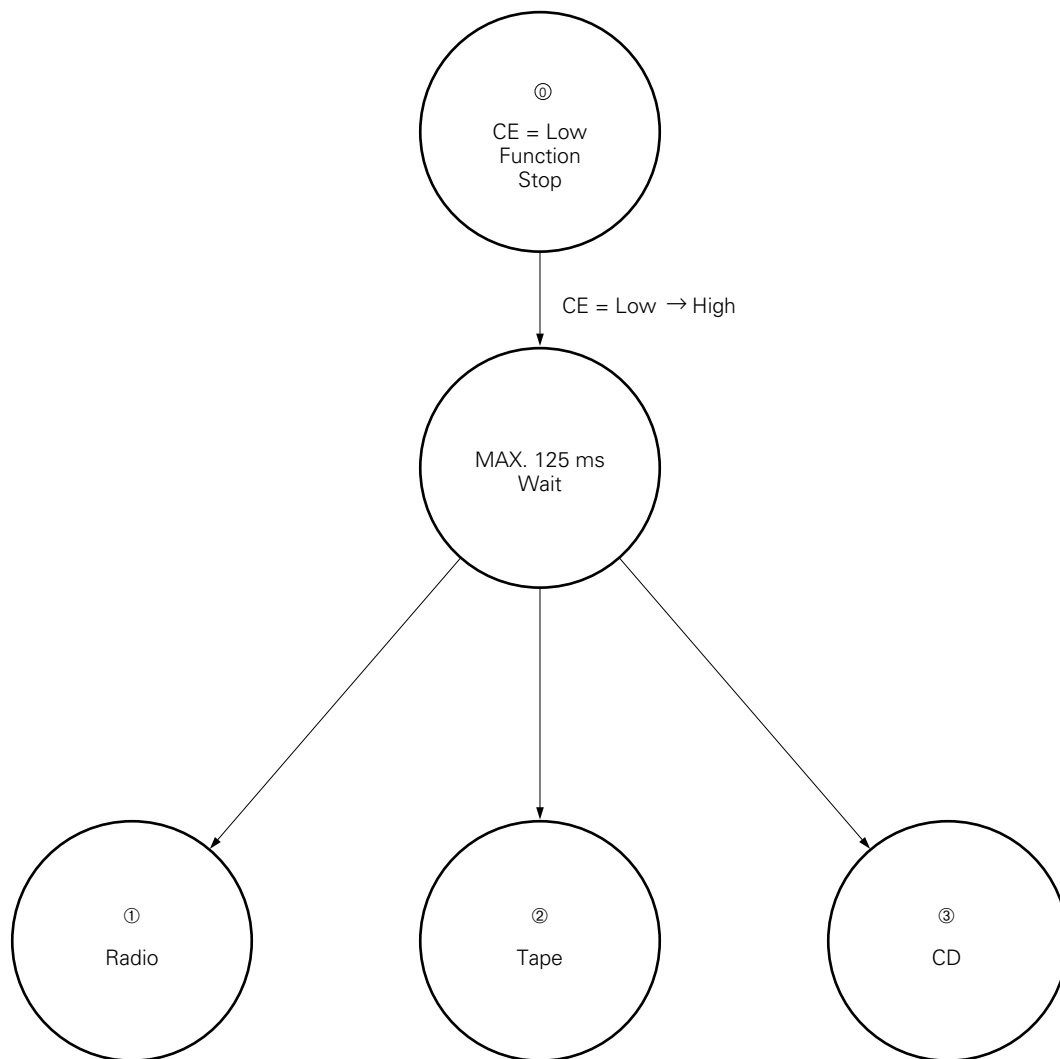

The radio mode is turned on and off by CE pin.

Switching to the tape and CD modes is performed by TPSET and CDSET switches, respectively.

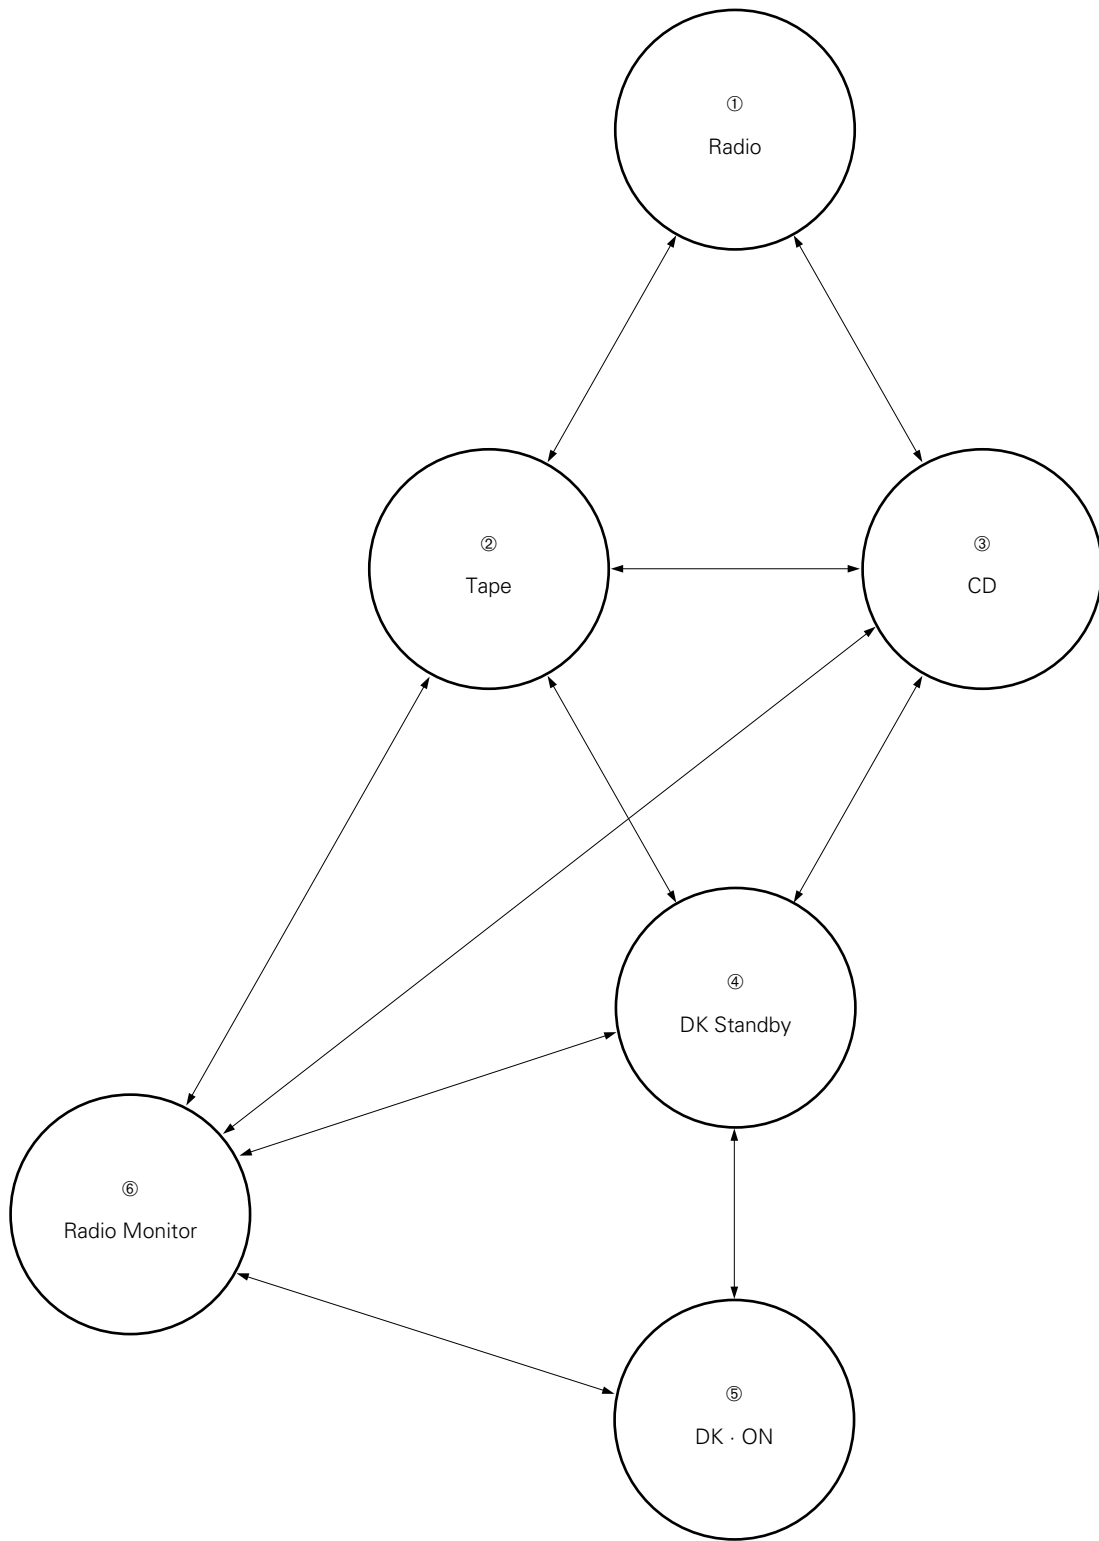

When RDON = 1, do not use the RDSET switch.

When the CE pin is made Low level, clock display is not performed.

(1) When CE pin changed Low to High

(2) When CE pin High level

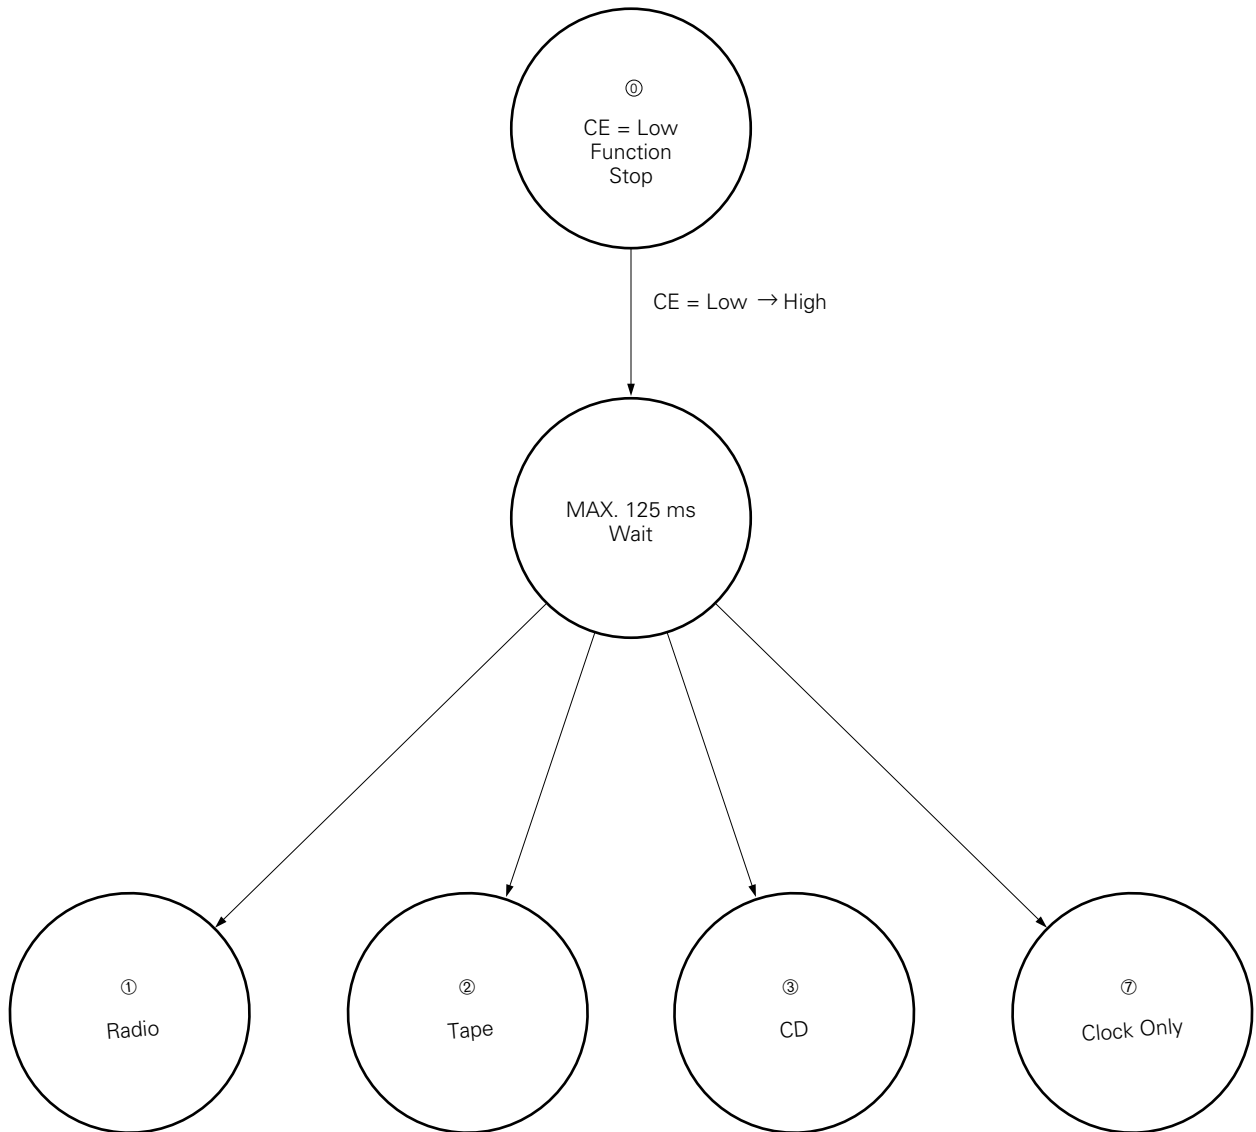

2.2 RADIO ON/OFF BY RDSET SWITCH

The radio mode is turned on and off by RDSET switch.

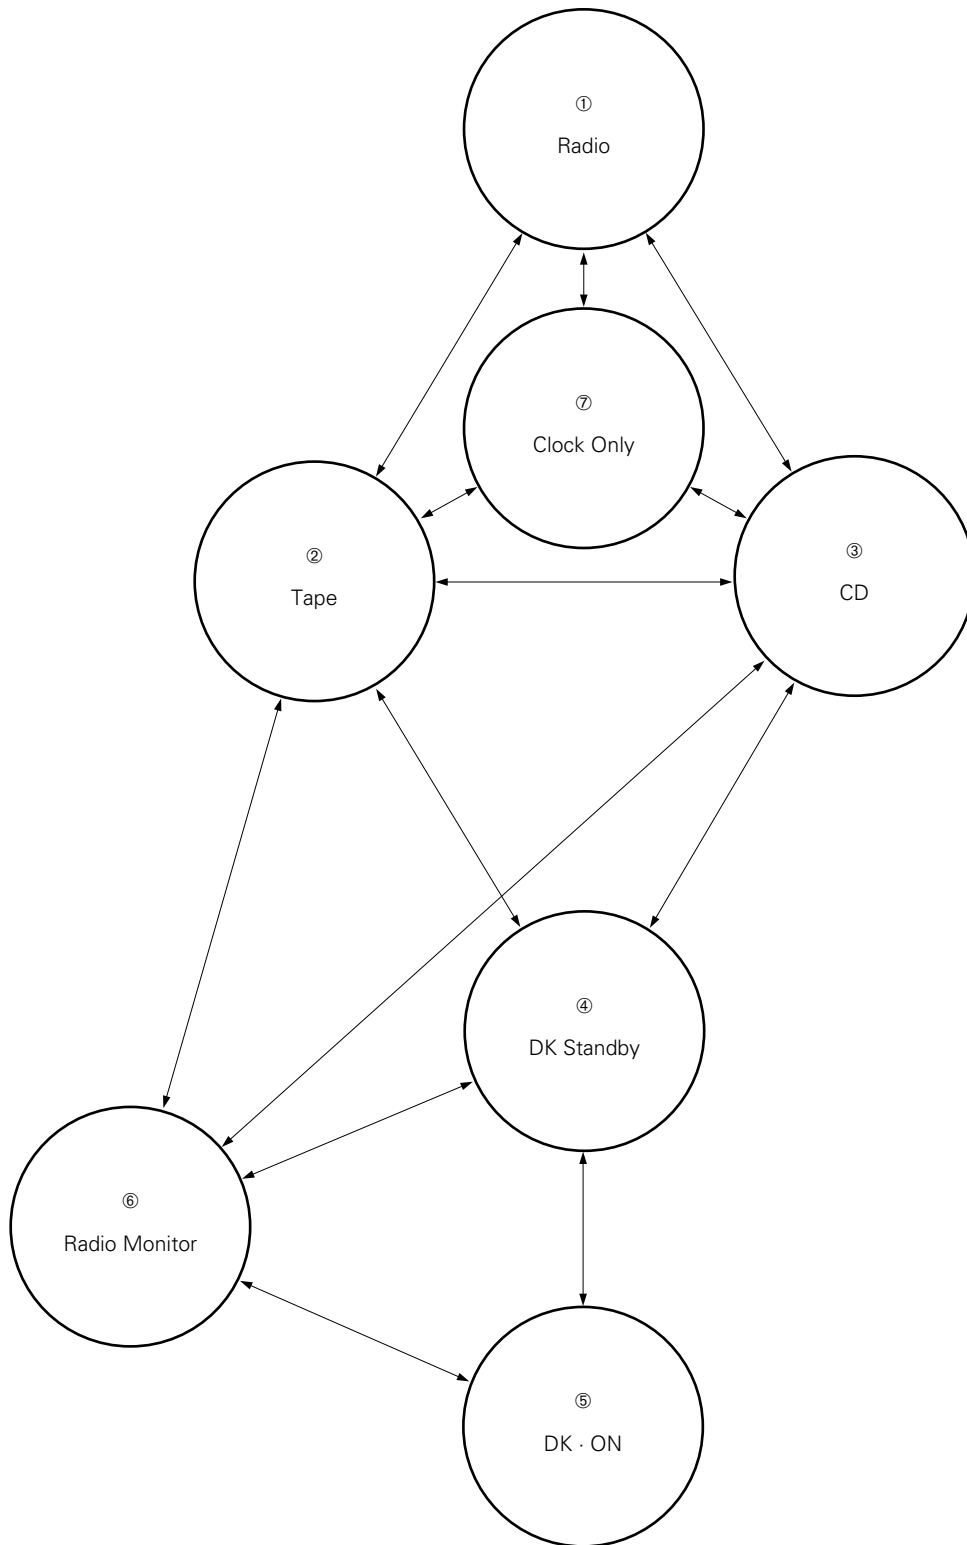

Switching to the tape and CD mode is performed by TPSET and CDSET switch, respectively.

The difference from RDON = 1 of 3.1 is that the clock is displayed even when the radio, tape, and CD modes are OFF.

(1) When CE pin changed Low to High

(2) When CE pin High level

2.3 DESCRIPTION OF EACH MODE

Mode	Description
① CE = Low	Backup mode. When the NOCLK switch is set to no-clock, low consumption current (400 nA max.) backup is possible. When clock is selected, the device is set to the clock count mode. In the clock mode, the maximum consumption current is 500 μA.
① Radio	When the CE pin is High level and the TPSET and CDSET switches are OFF, the device is set to the radio mode.
② Tape	When the CE pin is High level and the TPSET switch is ON and the CDSET switch is OFF, the device is set to the tape mode.
③ CD	When the CE pin is High level and the CESET switch is ON, the device is set to the CD mode.
④ DK standby	When the VF band is received in the radio mode and the mode is switched to the tape or CD mode by TPSET or CDSET switch, the device is set to the DK standby mode. The device is also set to the DK standby mode by pressing the <input type="text" value="VF"/> key in the tape or CD modes. In the DK standby mode, VF band tuning operation is enabled.
⑤ D • K	When the DK switch is set to ON in the DK standby mode, the device enters the DK• ON mode. In the DK• ON mode, radio muting (<u>RDMUTE</u> pin) is turned off and audio muting (<u>AMUTE</u> pin) is turned on.
⑥ Radio monitor	When the tape mode is set by TPSET switch when the radio monitor mode is ON by <input type="text" value="RDMONI"/> in the radio mode, the device enters the radio monitor mode. The radio monitor mode is also set by pressing the <input type="text" value="RDMONI"/> key in the tape and CD modes. In the radio monitor mode, normal tuning operation is possible. In the radio monitor mode, radio muting (<u>RDMUTE</u> pin) is turned off and audio muting (<u>AMUTE</u> pin) is turned on.
⑦ Clock	NOCLK = 0 Only clock display is performed. Clock adjustment is also possible. NOCLK = 1 Function is disabled. However, since the CE pin is High level, the consumption current is 500 μA TYP.

2.4 RADIO ON/OFF BY POWER KEY

The POWER key is invalid when the CE pin is High level.

Each time the key is pressed, the POWER pin (pin 23) output is inverted.

Therefore, a circuit is configured so that the radio is turned on and off by setting RDON = 0 and turning the RDSET switch on and off by POWER pin.

For details, see **6 "Application Circuits"**.

3.6 DESCRIPTION OF DISPLAYS

Display	Description
VF	Indicates that the device is on the VF band.
SK	Indicates that the SK signal is input. It lights when the SK switch is turned on at the FM and VF bands.
ST	Indicates that a STEREO signal is input. It lights when the \overline{ST} pin (pin 64) becomes Low on the FM and VF bands. However, it does not light in the MONO mode.
MONO	Indicates that the device is in the MONORAL mode. When the MONO key is pressed on the FM and VF bands, the display is inverted. High level is output from the MONO/NR ₂ pin (pin 18) while this display is lit. It is invalid on the MW and LW bands.
LOC	Indicates that the device is in the LOCAL mode. When AUTOLOC = 0, when the LOC key is pressed in a radio mode (FM, MW, LW bands), the display is inverted. When AUTOLOC = 1, this display lights during autotuning local search. High level is output from the LOC pin (pin 10) during autotuning while this display is lit.
LOUD	Indicates that the device is in the LOUDNESS state. When the LOUD key is pressed in the radio, tape, or CD mode, this display is inverted. High level is output from the LOUD pin (pin 19) while this display is lit.
MTL	Indicates that the device is in the METAL state. When the METAL function key is pressed in the tape mode, this display is inverted. High level is output from the MTL pin (pin 21) while this display is lit.
NR ₁	Indicates that the device is in the NR ₁ (Noise Reduction) state. When the device is placed into the NR ₁ state by NR function key in the tape mode, this display lights. High level is output from the NR ₁ pin (pin 22) while this display is lit.
NR ₂	Indicates that the device is in the NR ₂ (Noise Reduction) state. The NR ₂ function can be used with the initialize diode ENNR ₂ switch. When the device was placed into the NR ₂ state by NR function key in the tape mode, this display lights. High level is output from the MONO/NR ₂ pin (pin 18) while this display is lit.
DKSTBY	Lights in the DK standby and DK ON modes in the tape/CD mode.
◀ ▶	Indicates the direction of tape travel. In the tape mode, this display indicates the tape direction according to the state of the RL switch. If the FF switch is ON, this display flashes. For more information, see the description of each pin.

Display	Description
FM1 FM2 FM3 MW1 (MW) MW2 (LW)	Indicates the receiving band in the radio mode. In Europe, when the device is switched to LW band, "MW2 (LW)" lights.
 <p>The diagram shows four examples of the 7-segment display. The first shows '50.00' with a small square to the right. The second shows '50.00' with a small square to the left. The third shows '12:00' with a small square to the left. The fourth shows '12:00' with a small square to the right.</p>	Displays the receiving frequency, CD, and clock. <ul style="list-style-type: none"> Receiving frequency display Displayed in the radio mode. "50" is displayed only on the Europe and South Africa FM bands. "." (D.P) is displayed as the decimal point on the FM bands. CD display When the device enters the CD mode, the following is displayed. Clock display 12 hour clock or 24 hour clock can be selected by initialize diode CLKDSP switch. Flashing of the ":" (colon) display is possible by initialize diode FLASH switch.
AMS	Indicates that the device is in the AMS (Auto Music Search) state. When the <input type="button" value="AMS"/> function key is pressed in the tape mode, this display is inverted. High level is output from the AMS pin (pin 20) while this display is lit.
AM PM	12 hour clock AM and PM display.
 <p>The diagram shows a 7-segment display with the letters 'ch' displayed. The 'c' is formed by the top, left, and right segments, and the 'h' is formed by the top, right, and bottom segments.</p>	Indicates the preset memory number and AMS selection number. <ul style="list-style-type: none"> Preset memory number display In the radio mode, when preset memory write and call are performed, the corresponding preset memory number and "ch" are displayed. In the memory write mode set by <input type="button" value="ME"/> key, the "ch" display flashes at 1 Hz. During preset memory scanning by <input type="button" value="PSCAN"/> key, the preset memory number display (Ca to Cg) flashes at 1 Hz.
RDMONI	Lights in the radio monitor mode.

4. RADIO MUTE OUTPUT TIMING (RDMUTE)

- ① Key ON chattering prevention
- ② Premuting and BEEP output
- ③ Division ratio setting and display contents updating
- ④ Postmuting
- ⑤ Scan time
- ⑥ PLL lock wait time

4.1 RADIO MUTE (RDMUTE PIN) OUTPUT TIMING CHARTS

(1) Manual up/down

(i) 1 channel up/down

(a) AUTO500 switch = 0

(b) AUTO500 switch = 1

At the band edge (between lowest frequency and highest frequency) of both (a) and (b), time ④ is 625 to 750 ms.

(ii) Continuous up/down

(a) AUTO500 switch = 0

At the band edge, time ⑤ becomes 540 to 665 ms and time ④ becomes 625 to 750 ms.

(b) When AUTO500 switch = 1, continuous up/down is not performed because holding down the key for more than 0.5 seconds sets autotuning.

(2) Auto up/down

(i) SEEK UP, SEEK DWN, SCAN UP, SEEK DWN keys

(ii) MAN UP or MAN DWN key held down for more than 0.5 seconds when AUTO500 switch = 1

At both (i) and (ii), at the band edge time ⑤ becomes 520 to 695 ms.

IF check is performed twice, once in the FAST mode and once in the SLOW mode.

FAST mode IF check takes approx. 6 ms on the FM, MW, and LW bands and SLOW mode IF check takes approx. 15 ms on the FM band and approx. 25 ms on the MW and LW bands.

(3) Preset memory call

(i) M2S switch = 0

(ii) M2S switch = 1

(4) Preset memory write

(i) M2S switch = 0

(ii) When M2S switch = 1, muting is not output.

(5) Preset memory scan

(6) VF mode

(i) When **VF** mode selected with VF key ON

(ii) Seek and scan operation in VF mode

(7) Band switching

(8) Radio OFF to ON

(i) RDSET switch

(ii) CE LOW to HIGH by RDON switch = 1

(9) Tape or CD OFF to ON

(10) CE pin High to Low

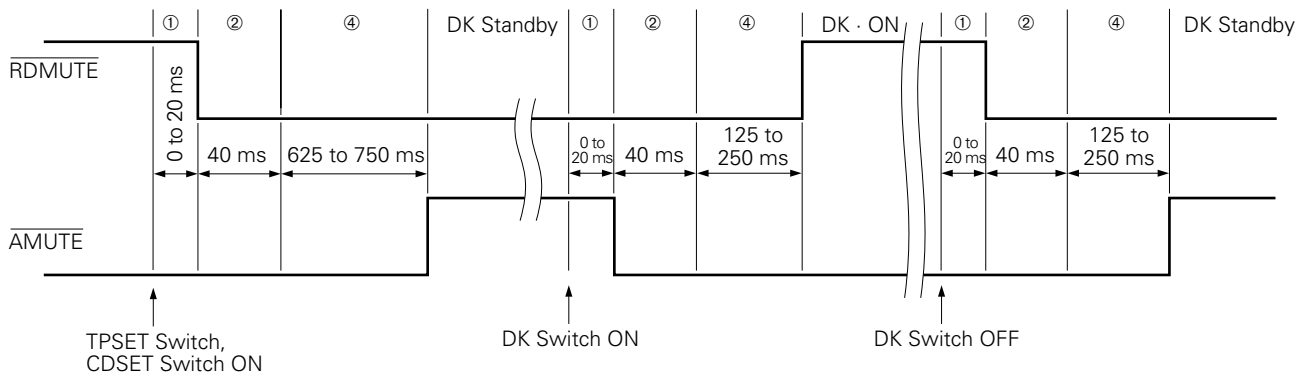

4.2 RADIO MUTE (RDMUTE PIN) AND AUDIO MUTE (AMUTE PIN) OUTPUT TIMING CHARTS

(1) When switched from radio mode to tape or CD mode
(Other than VF band, other than radio monitor mode)

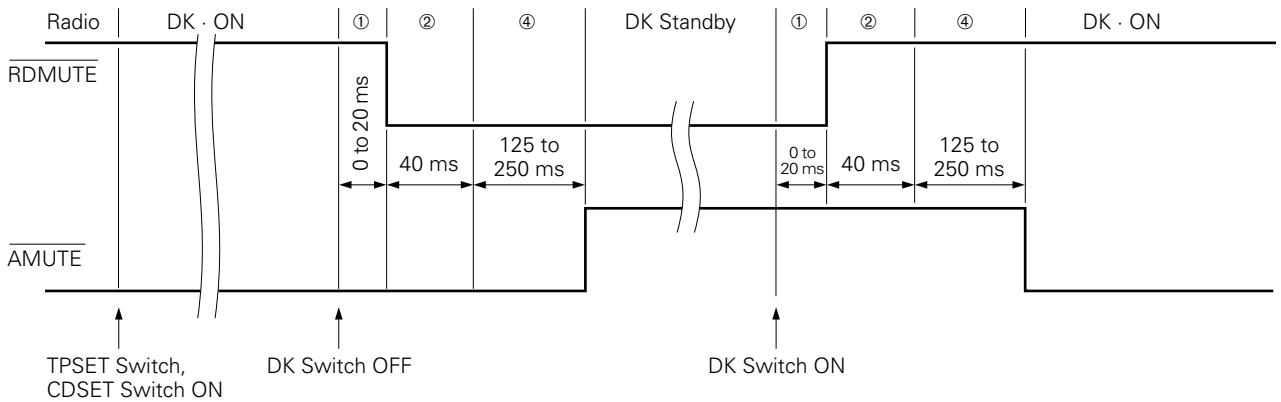

(2) When switched from VF band to tape or CD mode (Set MUTESEL to 0.)

i) When switched when DK = OFF

ii) When switched when DK = ON

(3) Radio monitor mode (Set MUTESEL to 0.)

i) When switched from radio monitor OFF in radio mode

ii) When switched from radio monitor ON in radio mode

5. PIN I/O CIRCUITS

The I/O circuit of each pin of the μ PD1723 is shown below in abbreviated form.

(1) LCD₀/KS₀ to LCD₂₇/PL₃, CGP, PB₀/SO to PB₃, PD₁ to PD₃, EO₁, EO₂

(2) $\overline{\text{INT}}$, AD

(3) PA₀/AMIF, PA₁/FMIF, PA₂/SI, PA₃/ $\overline{\text{SCK}}$, PC₀ to PC₃

(4) COM₁, COM₂

(5) K₀ to K₃

(6) VCOH, VCOL

(7) CE

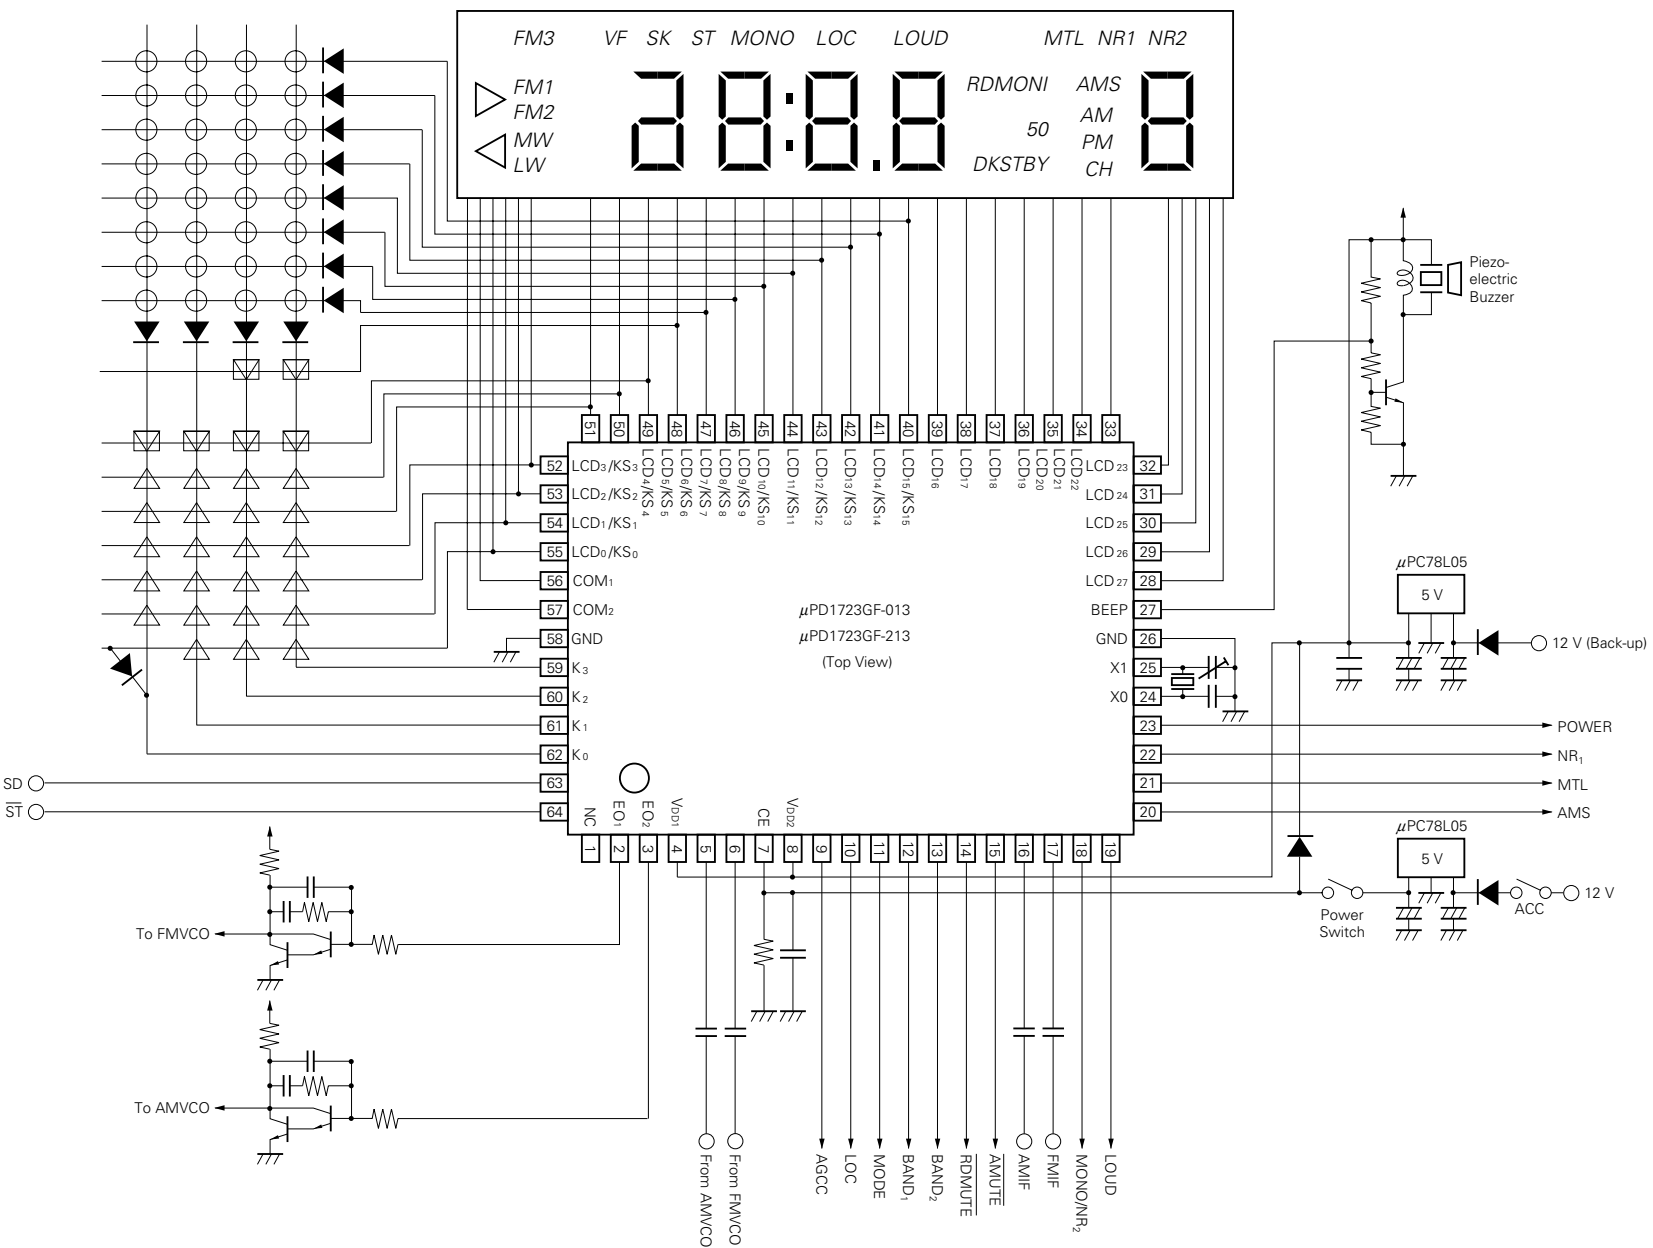

Schmitt Triggered Input with Hysteresis Characteristics

6. APPLICATION CIRCUITS

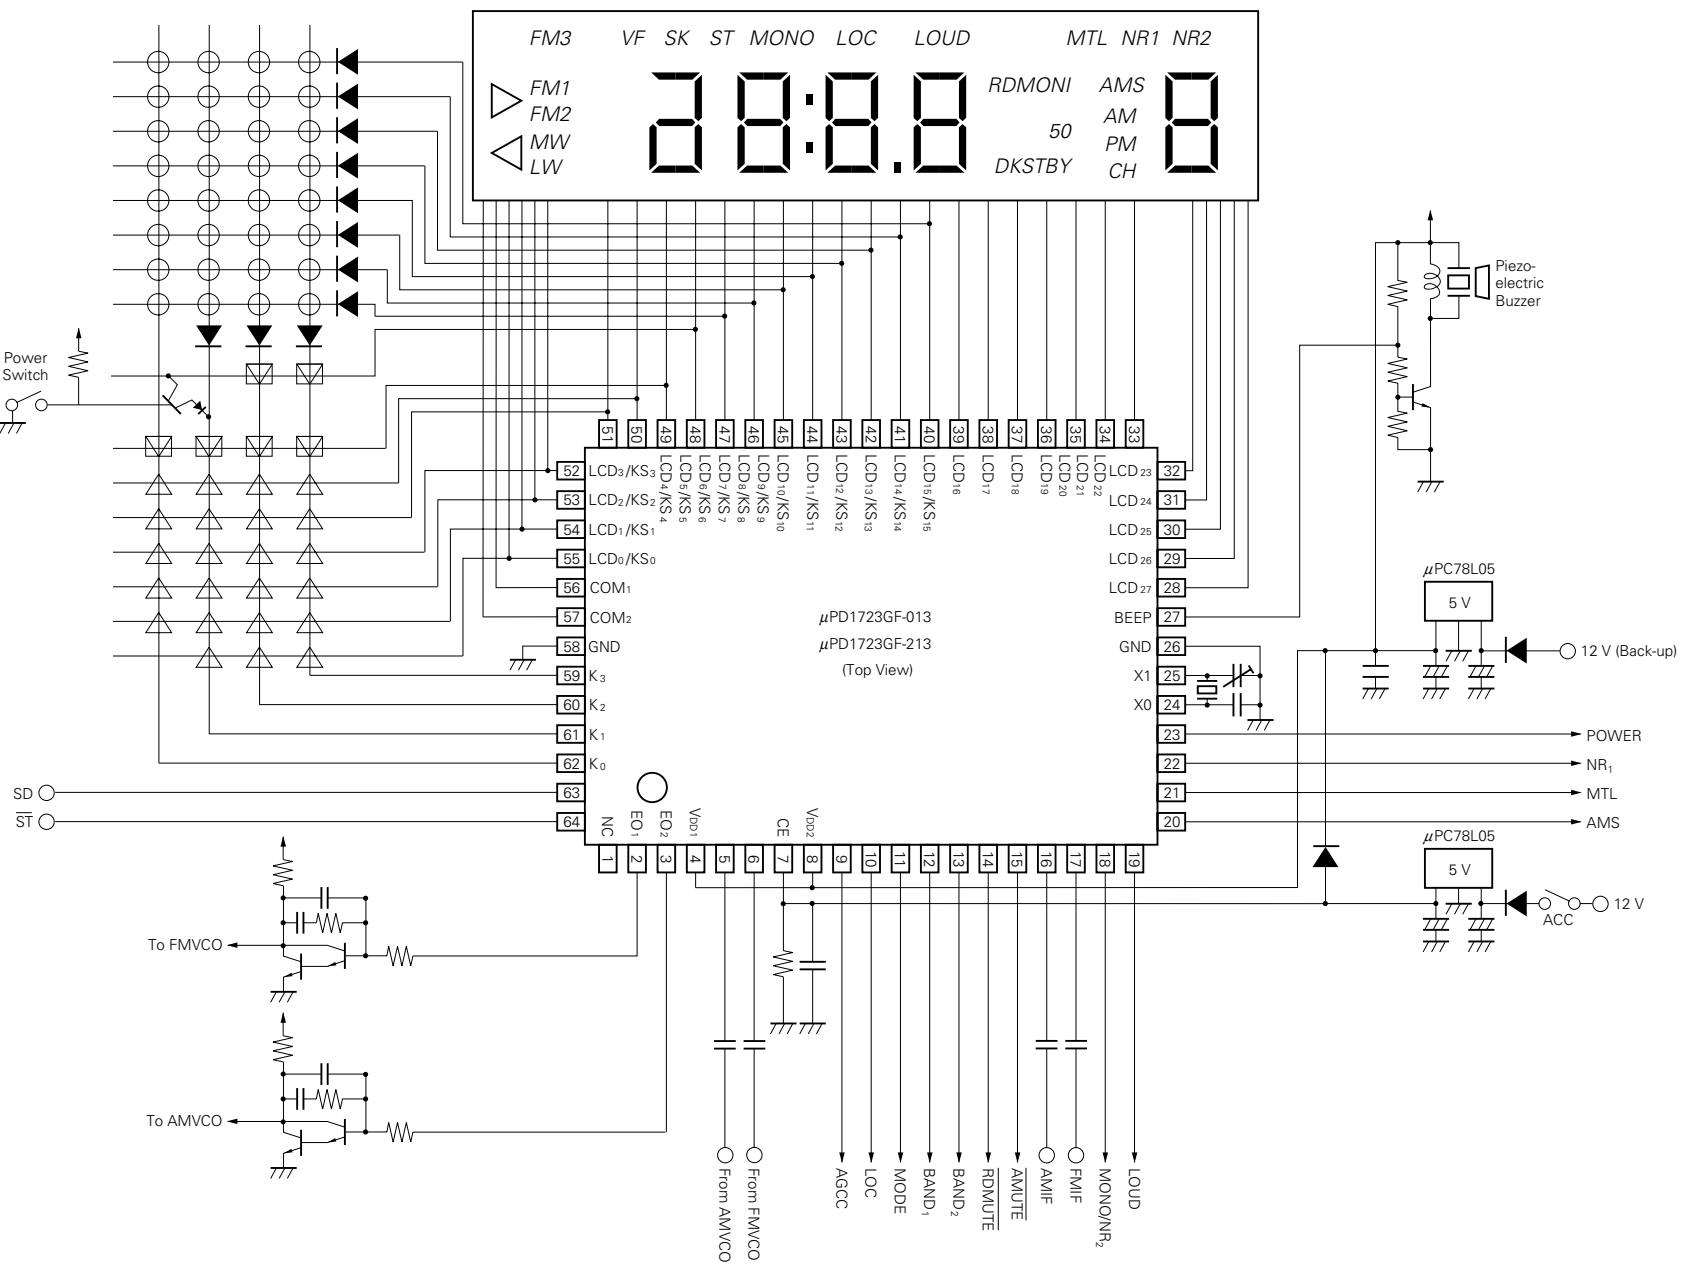

6.1 POWER ON/OFF (NO CLOCK DISPLAY AT POWER OFF) BY ALTERNATE SWITCH ()

Radio ON by RDON switch = 1 and CE pin Low to High

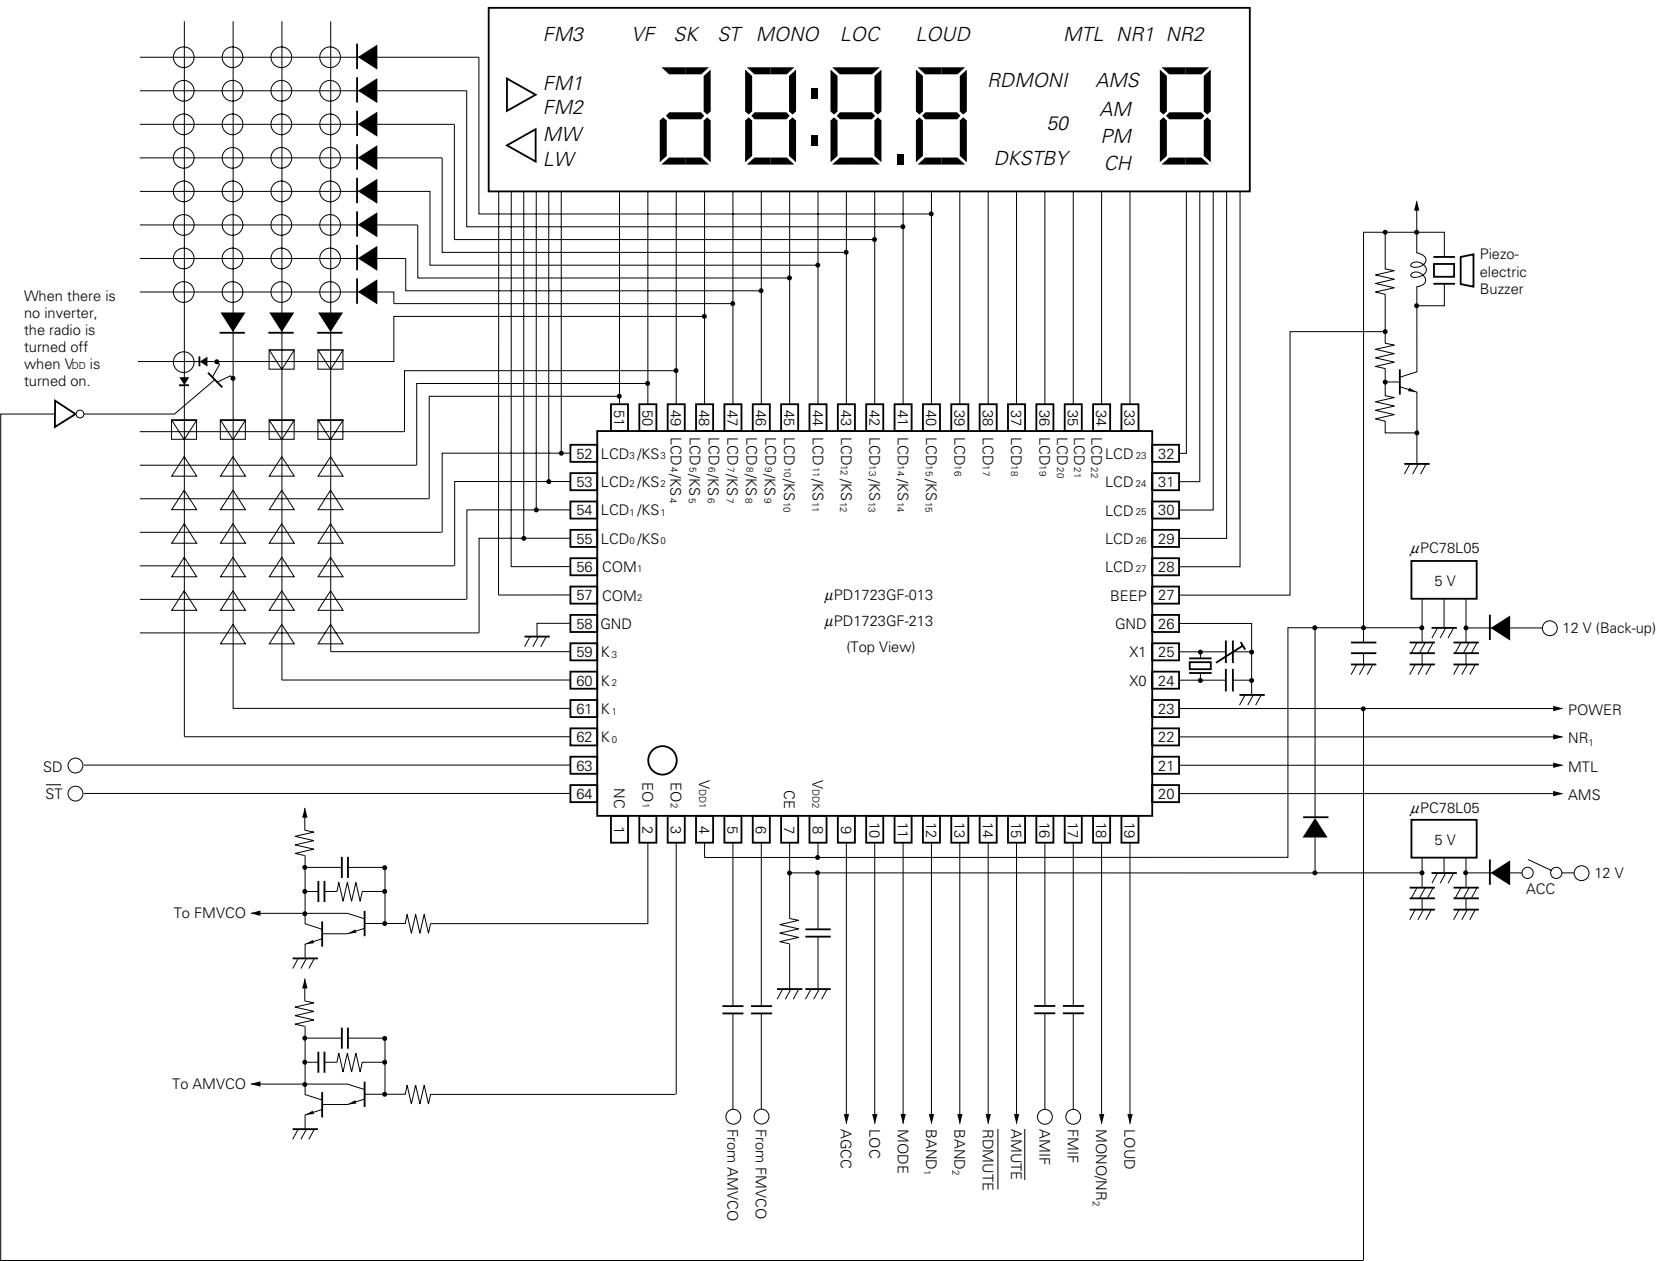

The application circuits and their parameters are for references only and are not intended for use in actual design-in's.

6.2 POWER ON/OFF (CLOCK DISPLAY AT POWER OFF) BY ALTERNATE SWITCH ()
By RDSET switch

The application circuits and their parameters are for references only and are not intended for use in actual design-in's.

6.3 POWER ON/OFF (CLOCK DISPLAY AT POWER OFF) BY MOMENTARY SWITCH ()

The application circuits and their parameters are for references only and are not intended for use in actual design-in's.

Input Voltage High	V _{IH3}	0.6 V _{DD}			V	K ₃ to K ₀
Input Voltage Low	V _{IL1}			0.2 V _{DD}	V	PORT A, C, CE, $\overline{\text{INT}}$
Input Voltage Low	V _{IL2}			0.15 V _{DD}	V	K ₃ to K ₀
Output Current High	I _{OH1}	-0.4			mA	PORT A, B, C, D V _{OH} = V _{DD} - 0.4 V
Output Current High	I _{OH2}	-0.5			mA	EO ₁ , EO ₂ , CGP, LCD ₂₇ /PL ₃ to LCD ₂₄ /PL ₀ V _{OH} = V _{DD} - 1 V
Output Current High	I _{OH3}	-200	-280		μA	LCD ₀ to LCD ₂₃ V _{OL} = V _{DD} - 1 V
Output Current Low	I _{OL1}	0.6			mA	PORT A, B, C, D, CGP, LCD ₂₇ /PL ₃ to LCD ₂₄ /PL ₀ V _{OH} = 0.4 V
Output Current Low	I _{OL2}	0.5			mA	EO ₁ , EO ₂ V _{OL} = 1 V
Output Current Low	I _{OL3}	200	300		μA	LCD ₀ to LCD ₂₃ V _{OL} = 1 V
Input Current High	I _{IH1}	15	120	200	μA	K ₃ to K ₀ V _I = V _{DD} = 4.5 V
Input Current High	I _{IH2}	100			μA	VCOH, VCOL, XI V _I = V _{DD} = 4.5 V
Output Voltage	V _{COM1}	4.8	5.0		V	COM ₁ , COM ₂ V _{DD} = 5 V, output open
Output Voltage	V _{COM2}	2.3	2.5	2.7	V	COM ₁ , COM ₂ V _{DD} = 5 V, output open
Output Voltage	V _{COM3}	0	0.2		V	COM ₁ , COM ₂ V _{DD} = 5 V, output open
Output off Leakage Current	I _L		10 ⁻³	1	μA	EO ₁ , EO ₂ V _O = V _{DD} , T _a = 25 °C
A/D Converter Resolution				6	bit	
A/D Converter Absolute Accuracy			1	1.5	LSB	T _a = -10 to +50 °C
Supply Current	I _{DD1}		20		mA	CPU and PLL operating (f _{in} = 150 MHz) V _{DD} = 5 V, T _a = 25 °C
Supply Current	I _{DD2}		0.5		mA	PLL stopped, CPU operating V _{DD} = 5 V, T _a = 25 °C
Data Hold Current	I _{DR}		3	10	μA	X'tal oscillation stopped, T _a = 25 °C V _{DD} = 5 V
AD Input Resistance	R _I	1			MΩ	

AC CHARACTERISTICS (T_a = -40 to +85 °C, V_{DD} = 4.5 to 5.5 V)

CHARACTERISTICS	SYMBOL	MIN.	TYP.	MAX.	UNIT	CONDITIONS
Operating Frequency	f _{in1}	10		200	MHz	VCOH pin (positive sine wave input) V _{in} = 0.3 V _{P-P}
Operating Frequency	f _{in2}	0.50		30	MHz	VCOL pin (positive sine wave input) V _{in} = 0.3 V _{P-P}
Operating Frequency	f _{in3}	1		20	MHz	PA ₁ /FMIF pin (positive sine wave input) V _{in} = 0.1 V _{P-P}
Operating Frequency	f _{in4}	0.3		5	MHz	PA ₀ /AMIF pin (positive sine wave input) V _{in} = 0.1 V _{P-P}

8. PACKAGE DIMENSION

64 PIN PLASTIC QFP (14×20)

S64GF-100-3B8,3BE

NOTE

Each lead centerline is located within 0.20 mm (0.008 inch) of its true position (T.P.) at maximum material condition.

ITEM	MILLIMETERS	INCHES
A	23.2 ^{±0.4}	0.913 ^{+0.017} / _{-0.016}
B	20 ^{±0.2}	0.787 ^{+0.009} / _{-0.008}
C	14 ^{±0.2}	0.551 ^{+0.009} / _{-0.008}
D	17.2 ^{±0.4}	0.677 ^{±0.016}
F	1.0	0.039
G	1.0	0.039
H	0.40 ^{±0.10}	0.016 ^{+0.004} / _{-0.005}
I	0.20	0.008

U	1.55	0.061

9. RECOMMENDED SOLDERING CONDITIONS

The following conditions (see table below) must be met when soldering this product.

Please consult with our sales offices in case other soldering process is used, or in case soldering is done under different conditions.

TYPES OF SURFACE MOUNT DEVICE

For more details, refer to our document "SMT MANUAL" (IEI-1207)

μPD1723GF-013, μPD1723GF-213

Soldering process	Soldering conditions	SYMBOL
Infrared ray reflow	Peak package's surface temperature : 230 °C or below, Reflow time : 30 seconds or below (210 °C or higher), Number of reflow process : 1, Exposure limit* : None	IR30-00
VPS	Peak package's surface temperature : 215 °C or below, Reflow time : 40 seconds or below (200 °C or higher), Number of reflow process : 1, Exposure limit* : None	VP15-00
Wave soldering	Solder temperature : 260 °C or below, Flow time : 10 seconds or below, Number of flow process : 1, Exposure limit* : None	WS60-00
Partial heating method	Terminal temperature : 300 °C or below, Flow time : 10 seconds or below, Exposure limit* : None	

*: Exposure limit before soldering after dry-pack package is opened.

Storage conditions : 25 °C and relative humidity at 65 % or less.

Note: Do not apply more than a single process at once, except for "Partial heating method".

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

The devices listed in this document are not suitable for use in the field where very high reliability is required including, but not limited to, aerospace equipment, submarine cables, nuclear reactor control systems and life support systems. If customers intend to use NEC devices for above applications or those intend to use "Standard", or "Special" quality grade NEC devices for the applications not intended by NEC, please contact our sales people in advance.

Application examples recommended by NEC Corporation

Standard: Data processing and office equipment, Communication equipment (terminal, mobile), Test and Measurement equipment, Audio and Video equipment, Other consumer products, etc.

Special: Automotive and Transportation equipment, Communication equipment (trunk line), Train and Traffic control devices, Industrial robots, Burning control systems, antidisaster systems, anticrime systems etc.
