

CERAMIC CURRENT LIMITERS

Background: A popular application for PTC thermistors is self-resetting current limiting. Some refer to PTC's as solid state fuses. However, these "fuses" do not require replacement after tripping and are useful for a countless number of trip cycles. This can be a definite advantage in equipment that is hard to service or has a high maintenance cost associated with it.

How does a PTC Thermistor limit current? As long as the current does not exceed the hold current, think of the PTC as a fixed resistor. This is not entirely true, but for practical purposes, please consider it for a moment. When the current level exceeds the trip current, usually as the result of a fault in the circuit, the PTC will heat up to a point above its switch temperature. When this hap-

pens, the resistance increases dramatically — usually several orders of magnitude. The PTC will continue to increase in resistance until the majority of the supply voltage is dropped across the PTC. While in the high resistance state, since the PTC is not a perfect open circuit, a small amount of residual current will still flow through the device. This residual current is, fortunately, a small percentage of the normal hold current. The PTC stays at the high resistance state until the overcurrent situation is corrected and part is allowed to cool.

Additional Specifications:

-TR suffix to the part number designates tape and reel per EIA-468-B. Some slight deviation may be required due to lead spacing which is

* Max VDC for 1 minute only

** a 70VDC version is also available

not always to 0.1" increments.
Please note "Q" style parts are not available taped and reeled.

Coating is a blue epoxy, UL-94VO type.

Solderability is to MIL-STD-202, method 208.

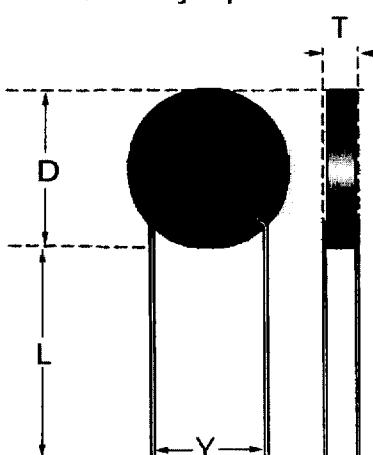

Resistance to Solder Heat is 260+/- 5°C for 10+/2 seconds per MIL-STD-202, method 210.

Terminal Strength is to MIL-STD-202, method 211, test condition A and C, 2.25 lbs. min.

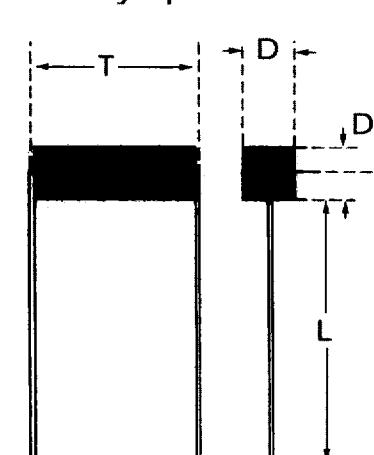

Mechanical shock: All parts will survive a 1.4 meter drop to a concrete floor without noticeable mechanical or electrical damage.

PHYSICAL DIMENSION KEY

CCL, "D" style parts

"Q" style parts

d = lead diameter

x = coating thickness
