Dust resistivity test

Condition: The sample is left in a room which contains about 2 kg of particles per 1 m³. A particle can pass through a square net having a line diameter of 50 μm and a gap of 75 μm.

Water spray test

Condition: The sample is subjected to water sprayed from every direction in a range of ±60° from the right angle at a precipitation of 10 to 20 mm/min.

■ ACCESSORIES (order separately)

Unit: mm (inch)

Actuator accessories

Three series of actuators are optionally available: VAL, VAM, and VAV series.

The actuators in the VAL series are designated for rotary cam operations.

The VAM series actuators are highly resistive to vibration and shock; so, they are ideal for machine tools and automatic doors where the switches are subject to heavy vibration or shock.

The VAV series actuators are highly sensitive to force. Therefore, they should be used in an application where the operating force to be applied to the switch is critical.

All these actuators can be mounted on all OMRON basic switches having the following dimensions.

Leaf spring type VAL

Operating characteristics	V-15G-1A5-K
OF max.	230 g

 2. Models approved by DEMKO, NEMKO, BEAB and SETI are also available. Consult OMRON for detailed information.

Precautions

■ MOUNTING

The switch is mounted with two M3 screws. When doing so, use an appropriate screwdriver and tighten the screws at a torque of 4 to 6 kg-cm.

To solder the lead to the terminal, apply a soldering iron rated at 60 W max. quickly (within 5 seconds) with the actuator at the free position.

Note that applying a soldering iron for too long a time or using one that is rated at more than 60 W may degrade the switch characteristics.

■ OPERATION

Make sure that the operating body pushes the switch actuator with an adequate force when the switch is to be operated, and that it does not touch the actuator when the switch is released.

Do not change the operating position by modifying the actuator.

Do not use the switch in an application where the operating speed is extremely slow or the actuator is set in the midpoint between the free position and operating position.

Install the pin plunger switch so that the operating force is applied in alignment with the stroke of the actuator. The switch should be set so that its stroke is in the range of 60 to 90% of the rated OT (minimum value) when the switch has been operated.
