The documentation and process conversion measures necessary to comply with this revision shall be completed by 6 January 2006.

INCH-POUND

MIL-PRF-19500/117N 6 October 2005 SUPERSEDING MIL-PRF-19500/117M 13 January 2004

PERFORMANCE SPECIFICATION SHEET

SEMICONDUCTOR DEVICES, DIODE, SILICON, VOLTAGE REGULATOR, TYPES 1N962B-1 THROUGH 1N992B-1, AND 1N962BUR-1 THROUGH 1N992BUR-1, 1N962C-1 THROUGH 1N992C-1, AND 1N962CUR-1 THROUGH 1N992CUR-1, AND 1N962D-1 THROUGH 1N992DUR-1 THROUGH 1N992DUR-1, JAN, JANTX, JANTXV, AND JANHC

JANS level (see 6.4).

This specification is approved for use by all Departments and Agencies of the Department of Defense.

The requirements for acquiring the product described herein shall consist of this specification sheet and MIL-PRF-19500.

1. SCOPE

- 1.1 <u>Scope</u>. This specification covers the performance requirements for 500 milliwatt, silicon, voltage regulator diodes with voltage tolerances of 5 percent, 2 percent, and 1 percent. Three levels of product assurance are provided for each encapsulated device type as specified in MIL-PRF-19500. One level of product assurance is provided for each unencapsulated device type.
 - 1.2 Physical dimensions. See figure 1 (similar to DO-35), figure 2 (DO-213AA), and figure 3 for (JANHC die).
- * 1.3 <u>Maximum ratings</u>. Maximum ratings are as shown in maximum and primary test ratings (see 3.8) herein and as follows:
 - a. P_{TL} = 500 mW, (DO-35) at T_L = +50°C, L = .375 inch (9.53 mm); both ends of case or diode body to heat sink at L = .375 inch (9.53 mm). Derate I_Z to 0.0 mA dc at +175°C.
 - b. P_{TEC} = 500 mW, (DO-213AA) at T_{EC} = +125°C, derate to 0 at +175°C. -65°C \leq T_{J} \leq +175°C; -65°C \leq T_{STG} \leq +175°C.
 - c. $P_{T(PCB)} = 500 \text{ mW}, T_A = 75^{\circ}\text{C}.$

AMSC N/A FSC 5961

^{*} Comments, suggestions, or questions on this document should be addressed to Defense Supply Center, Columbus, ATTN: DSCC-VAC, P.O. Box 3990, Columbus, OH 43218-3990, or emailed to Semiconductor@dscc.dla.mil. Since contact information can change, you may want to verify the currency of this address information using the ASSIST Online database at http://assist.daps.dla.mil.

- * 1.4 <u>Primary electrical characteristics</u>. Primary electrical characteristics are as shown in maximum and primary test ratings (see 3.8) herein and as follows:
 - a. $11 \text{ V dc} \le V_Z \le 200 \text{ V dc}.$
 - b. 1N962B-1 through 1N992B-1 are 5 percent voltage tolerance.
 - c. 1N962C-1 through 1N992C-1 are 2 percent voltage tolerance.
 - d. 1N962D-1 through 1N992D-1 are 1 percent voltage tolerance.

Thermal resistance:

 $R_{\theta JL} = 250^{\circ} \text{C/W}$ maximum at L = .375 inch (9.53 mm) (DO-35).

 $R_{\theta JEC}$ = 100°C/W maximum. Junction to end-caps (DO-213AA).

 $R_{\theta JA(PCB)} = 300^{\circ}C/W$ junction to ambient including PCB see note (1).

(1) See figures 4, 5, and 6 for derating curves. $T_A = +75^{\circ}C$ for both axial and MELF (US) on printed circuit board (PCB), PCB = FR4 .0625 inch (1.59 mm) 1-layer 1-Oz Cu, horizontal, still air, pads (US) = .067 inch (1.70 mm) x .105 inch (2.67 mm); pads (axial) = .092 inch (2.34 mm) diameter, strip = .030 inch (7.62 mm) x 1 inch (25.4 mm) long, axial lead length L \leq .187 inch (\leq 4.76 mm); $R_{\theta}JA(PCB)$ with a defined thermal resistance condition included is measured at I_7 = as defined in the electrical characteristics tolerance table herein.

2. APPLICABLE DOCUMENTS

2.1 <u>General</u>. The documents listed in this section are specified in sections 3, 4, or 5 of this specification. This section does not include documents cited in other sections of this specification or recommended for additional information or as examples. While every effort has been made to ensure the completeness of this list, document users are cautioned that they must meet all specified requirements of documents cited in sections 3, 4, or 5 of this specification, whether or not they are listed.

2.2 Government documents.

2.2.1 <u>Specifications, standards, and handbooks</u>. The following specifications, standards, and handbooks form a part of this document to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation or contract.

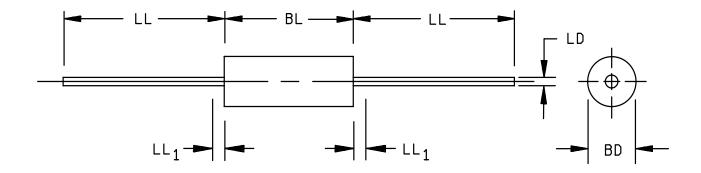

DEPARTMENT OF DEFENSE SPECIFICATIONS

MIL-PRF-19500 - Semiconductor Devices, General Specification for.

DEPARTMENT OF DEFENSE STANDARDS

MIL-STD-750 - Test Methods for Semiconductor Devices.

- * (Copies of these documents are available online at http://assist.daps.dla.mil/quicksearch/ or from the Standardization Document Order Desk, 700 Robbins Avenue, Building 4D, Philadelphia, PA 19111-5094.)
- 2.3 <u>Order of precedence</u>. In the event of a conflict between the text of this document and the references cited herein, the text of this document takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

NOTES:

- 1. Dimensions are in inches.
- 2. Millimeters are given for general information only.
- 3. The physical characteristics of the die thickness are $.010\pm.002$ (0.25 mm). Metallization is top = (anode)-AL, back: (cathode)-AU. AL thickness = 12,000 Å minimum for JANHCA and 40,000 Å minimum for JANHCB, AU thickness = 3,000 Å minimum for JANHCA, and 5,000 Å minimum for JANHCA.
- 4. Circuit layout data: For zener operation, cathode must be operated positive with respect to anode.
- 5. Requirements in accordance with appendix G of MIL-PRF-19500, are performed in a TO-5 package (see 6.5).

FIGURE 3. Physical dimensions (JANHCA and JANHCB die dimensions).

3. REQUIREMENTS

- 3.1 General. The individual item requirements shall be as specified in MIL-PRF-19500 and as modified herein.
- 3.2 <u>Qualification</u>. Devices furnished under this specification shall be products that are manufactured by a manufacturer authorized by the qualifying activity for listing on the applicable qualified manufacturer's list (QML) before contract award (see 4.2 and 6.3).
- * 3.3 <u>Abbreviations, symbols, and definitions.</u> The abbreviations, symbols, and definitions used herein are defined in MIL-PRF-19500, and as follows.
 - EC - - end-caps.
 - $R_{\theta JA(PCB)}$ - thermal resistance junction to ambient, with a defined printed circuit board mounting.
 - $R_{\theta,JBB}$ Thermal resistance junction to burn-in board.
- 3.4 <u>Interface and physical dimensions</u>. The interface and physical dimensions shall be specified in MIL-PRF-19500 and figures 1 and 2 (similar to DO-35 and DO-213AA), and figure 3 (die) herein.
- 3.4.1 <u>Lead finish</u>. Lead finish shall be solderable in accordance with MIL-PRF-19500, MIL-STD-750, and herein. Where a choice of lead finish is desired, it shall be specified in the acquisition document (see 6.2).
- * 3.4.2 <u>Diode construction</u>. All devices shall be metallurgically bonded double plug construction in accordance with the requirements of category I, II, or III (see MIL-PRF-19500).
- 3.5 Selection of tight tolerance devices. The C and D suffix devices shall be selected from JAN, JANTX, or JANTXV devices, which have successfully completed all applicable screening, and groups A, B, and C testing as 5 percent tolerance devices. All sublots of C and D suffix devices shall pass table I, subgroup 2, at tightened tolerances. Tighter tolerances for mounting clip temperature shall be maintained for reference purpose to establish correlation. For C and D tolerance levels, $T_1 = +25^{\circ}\text{C} \pm 2^{\circ}\text{C}$ at .375 inch from body or equivalent.
- 3.6 <u>Electrical performance characteristics</u>. Unless otherwise specified herein, the electrical performance characteristics are as specified in 1.3, 1.4, and table I, II, and III.
- * 3.7 Electrical test requirements. The electrical test requirements shall be the subgroups specified in table I herein.
- 3.8 <u>Maximum and primary test ratings</u>. Maximum and primary test ratings for voltage regulator diodes are specified in table IV herein.
- 3.9 <u>Marking</u>. Devices shall be marked in accordance with MIL-PRF-19500. At the option of the manufacturer, the DO-35 version may leave off "-" portion of the type designator (example: JANTX1N962B1).
- 3.9.1 <u>Marking of UR-1 version devices</u>. For UR-1 version devices only, all marking (except polarity) may be omitted from the body, but shall be retained on the initial container.
- 3.10 <u>Workmanship</u>. Semiconductor devices shall be processed in such a manner as to be uniform in quality and shall be free from other defects that will affect life, serviceability, or appearance.

4. VERIFICATION

- 4.1 <u>Classification of Inspections</u>. The inspection requirements specified herein are classified as follows:
 - a. Qualification inspection (see 4.2).
 - b. Screening (see 4.3).
 - c. Conformance inspection (see 4.4, and table I, II, III, and IV).
- 4.2 Qualification inspection. Qualification inspection shall be in accordance with MIL-PRF-19500 and as specified herein.
 - 4.2.1 JANHC devices. JANHC devices shall be qualified in accordance with appendix G of MIL-PRF-19500.
- 4.2.2 <u>Construction verification</u>. Cross sectional photos from three devices shall be submitted in the qualification report.
- * 4.3 <u>Screening (JAN, JANTX, and JANTXV levels only)</u>. Screening shall be in accordance with table IV of MIL-PRF-19500 and as specified herein. The following measurements shall be made in accordance with table I herein. Devices that exceed the limits of table I herein shall not be acceptable.

Screen (see table IV of	Measurement
MIL-PRF-19500)	JANTX and JANTXV levels
3a	Temperature cycling
(1) 3c	Thermal impedance (see 4.3.2)
7a	Not required
7b	Optional
9	Not required
11	I_{R1} and V_Z
12	See 4.3.3, t = 48 hours
(2) 13	ΔIR1 ≤ 100 percent of initial reading or 50 nA dc,
	whichever is greater.
	$\Delta V_Z \le \pm 2$ percent initial reading.
	Subgroup 2 of table I herein.
14a	Not required
(3) 14b	Required

- (1) Thermal impedance shall be performed any time after sealing provided temperature cycling is performed in accordance with MIL-PRF-19500, screen 3 prior to this thermal test.
- (2) PDA = 5 percent for screen 13 applies to ΔI_{R1} and ΔV_{Z} . Thermal impedance ($Z_{\theta JX}$) is not required in screen 13.
- (3) For clear glass diodes, the hermetic seal (gross leak) may be performed at anytime after temperature cycling.
- 4.3.1 Screening (JANHC). Screening of JANHC die shall be in accordance with appendix G of MIL-PRF-19500.
- 4.3.1.1 <u>JAN testing</u>. JAN level product will have temperature cycling and thermal impedance testing performed in accordance with MIL-PRF-19500, JANTX level screening level requirements.

- * 4.3.2 Thermal impedance. The thermal impedance measurements shall be performed in accordance with method 3101 or 4081, as applicable, of MIL-STD-750 using the guidelines in that method for determining I_M , I_H , t_H , t_M (and V_C where appropriate). The thermal impedance limit shall comply with the thermal impedance graph on figures 7, 8, and 9 (less than or equal to the curve value at the same t_H time) and shall be less than the process determined statistical maximum limit as outlined in method 3101 or 4081. (See table II, subgroup 4). See figure 10 for mounting conditions.
- * 4.3.3 <u>Power burn-in conditions</u>. Power burn-in conditions are as follows: I_{ZPCB} = column 8 of table IV; T_A = 75°C maximum. Test conditions in accordance with method 1038 of MIL-STD-750, condition B (see 4.5.9).

Adjust I_Z or T_A to achieve the required T_J . T_J = 125°C minimum.

Mounting condition shall be equivalent to the FR4 board (defined herein). $R_{\theta JA(PCB)} \ge R_{\theta JBB}$. Apply $I_Z = I_{ZPCB}$.

- 4.4 <u>Conformance inspection</u>. Conformance inspection shall be in accordance with MIL-PRF-19500 and as specified herein. Group A inspection shall be performed on each sublot.
- 4.4.1 Group A inspection. Group A inspection shall be conducted in accordance with MIL-PRF-19500, and table I herein.
- 4.4.2 <u>Group B inspection</u>. Group B inspection shall be conducted in accordance with the conditions specified for subgroup testing in table VIb (JAN, JANTX, and JANTXV) of MIL-PRF-19500 and 4.4.2.1 herein. Electrical measurements (end-points) shall be in accordance with the applicable inspections of table III herein.
- * 4.4.2.1 Group B inspection, table VIb (JAN, JANTX and JANTXV) of MIL-PRF-19500.

	Subgroup	Method	<u>Condition</u>
	B2	1056	0°C to +100°C, 10 cycles.
	B2	1051	-55°C to +175°C, 25 cycles.
	B2	4066	See 4.5.1.
*	В3	1027	I_{ZM} = column 8 of table IV (minimum). Adjust I_Z or T_A to achieve T_J = 150°C minimum (see 4.5.9).
	B4	2101	Decap analysis, scribe and break only.

* 4.4.3 <u>Group C inspection</u>. Group C inspection shall be conducted in accordance with the conditions specified for subgroup testing in table VII of MIL-PRF-19500, and as follows. Electrical measurements (end-points) shall be in accordance with table III herein.

	Subgroup	Method	Condition
	C2	1056	0°C to +100°C, 10 cycles.
	C2	1051	-55°C to +175°C, 20 cycles.
	C2	2036	Tension: Test condition A; weight = 4 pounds, t = 15 seconds. Lead fatigue: Test condition E. (Tension and lead fatigue are not required for UR-1 suffix devices)
	C2	1071	Test condition E.
	C3		Not applicable.
*	C5	4081	See 4.3.2 herein.
*	C6	1027	I_{ZM} = column 8 of table IV (minimum). Adjust I_Z or T_A to achieve T_J = 150°C minimum (see 4.5.9).
	C7		Not applicable.
	C8	4071	I_Z = column 5 of table IV; T_1 = +25°C ±5°C, T_2 = +125°C ±5°C. (Maximum limit in accordance with column 14 of table IV). Sample size = 22, c = 0. (See 4.5.4.)

- 4.4.4 <u>Group E inspection</u>. Group E inspection shall be conducted in accordance with appendix E, table IX of MIL-PRF-19500 and table II herein.
 - 4.5 Methods of inspection. Methods of inspection shall be as specified in the appropriate tables and as follows.
- 4.5.1 <u>Surge current (I_{ZSM})</u>. The peak currents shown in column 10 of table IV shall be applied in the reverse direction and these shall be imposed on the current ($I_Z = I_{Z1}$) (column 5 of table IV) a total of 5 surges at 1-minute intervals. Each individual surge shall be one-half square-wave-pulse of one one-hundred twenty second duration or an equivalent one-half sine wave with the same effective rms current.

- 4.5.2 Regulator voltage measurements. The test current shall be applied until thermal equilibrium is attained (90 seconds minimum) prior to reading the breakdown voltage. For this test, the diode shall be suspended by its leads with mounting clips whose inside edge is located at .375 inch (9.53 mm) from the body (UR version = 0 lead length) and the mounting clips shall be maintained at a temperature of $+25^{\circ}$ C $+8^{\circ}$ C, and -2° C. This measurement may be performed after a shorter time following application of the test current than that which provides thermal equilibrium if correlation to stabilized readings can be established to the satisfaction of the Government.
- $_{4.5.3}$ <u>Voltage regulation Vz (reg</u>). Voltage regulation shall be determined by the difference of the regulator voltage measured at different currents as specified in table I, subgroup 7 herein. Both tests shall be performed at thermal equilibrium. This ΔV_7 shall not exceed column 9 of table IV.
- 4.5.4 <u>Temperature coefficient of regulator voltage (αV_Z)</u>. The device shall be temperature stabilized with current applied prior to reading regulator voltage at the specified ambient temperature as specified in 4.4.3, subgroup C8.
- 4.5.8 Scope display evaluation. Scope display evaluation shall be stable in accordance with method 4023 of MIL-STD-750, condition A. Scope display may be performed on ATE (automatic test equipment) for screening only with the approval of the qualifying activity. Scope display in table I, subgroup 4 shall be performed on a scope. The reverse current over the knee shall be 500 μ A peak.
- * 4.5.9 <u>Free air burn-in and life tests</u>. Deliberate heat sinking, is prohibited unless otherwise approved by the qualifying activity. The use of a current limiting or ballast resistor is permitted provided that each DUT still sees the full P_t (minimum) and that the minimum applied voltage, where applicable, is maintained through out the burn-in period. Use method 3100 of MIL-STD-750 to measure T_J (see figure 11).

Temperature-Power Derating Curve

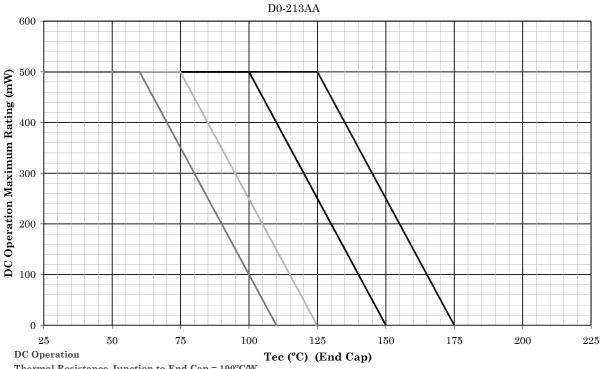

Thermal Resistance Junction to Leads 3/8" = 250°C/W

NOTES:

- 1. All devices are capable of operating at $\leq T_J$ specified on this curve. Any parallel line to this curve will intersect the appropriate power for the desired maximum T_J allowed.
- Derate design curve constrained by the maximum junction temperature (T_J ≤ 175°C) and power rating specified. (See 1.3 herein.)
- 3. Derate design curve chosen at $T_J \leq 150^{\circ}C$, where the maximum temperature of electrical test is performed.
- 4. Derate design curves chosen at $T_J \le$, 125°C, and 110°C to show power rating where most users want to limit T_J in their application.

* FIGURE 4. Temperature-power derating curve.

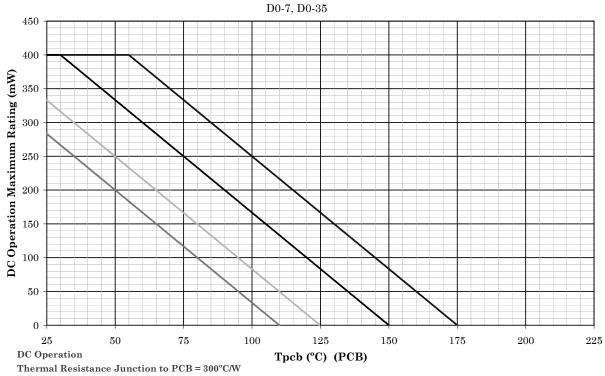

Thermal Resistance Junction to End Cap = 100 °C/W

NOTES:

- 1. All devices are capable of operating at ≤ T_J specified on this curve. Any parallel line to this curve will intersect the appropriate power for the desired maximum T_J allowed.
- 2. Derate design curve constrained by the maximum junction temperature (T_J ≤ 175°C) and power rating specified. (See 1.3 herein.)
- 3. Derate design curve chosen at $T_J \le 150^{\circ}C$, where the maximum temperature of electrical test is performed.
- 4. Derate design curves chosen at $T_J \le$, $125^{\circ}C$, and $110^{\circ}C$ to show power rating where most users want to limit T_J in their application.

* FIGURE 5. Temperature-power derating curve.

Temperature-Power Derating Curve

Thermal Impedance

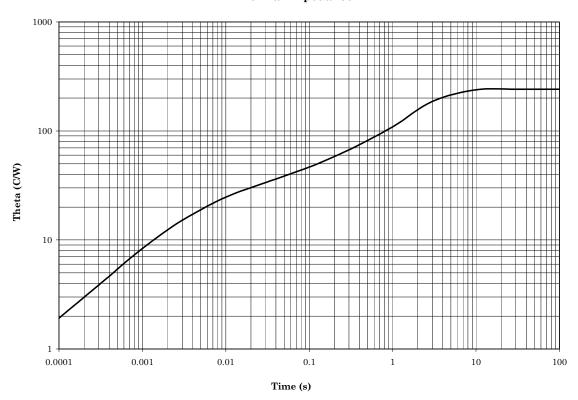

Thermal impedance DO-35 PCB mount, FR4, 1oz Cu, 50x87 mil pad (MELF) and 92 mil diameter (axial with .125 inch (3.175 mm) lead length) at T_A =25°C.

NOTE: Thermal resistance = 300°C/W. Maximum power rating = 400 mW at T_A =55°C.

* FIGURE 7. Thermal impedance DO-35 PCB mount.

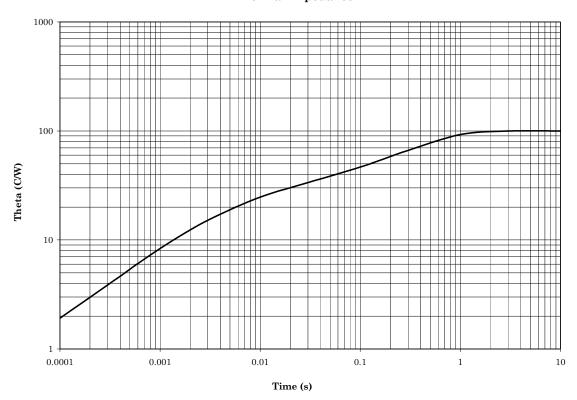

Thermal Impedance

Thermal impedance DO-35 axial, T_J = 25°C at .375 inch (9.52 mm) from body. NOTE: Thermal resistance = 250°C/W. Maximum power rating = 500 mW at T_J = 50°C.

* FIGURE 8. Thermal impedance DO-35 Axial.

Thermal Impedance

Thermal impedance DO-35 MELF, Tec=25°C. NOTE: Thermal resistance = 100°C/W. Power rating = 500 mW at Tec=125°C.

* FIGURE 9. Thermal impedance DO-213 MELF.

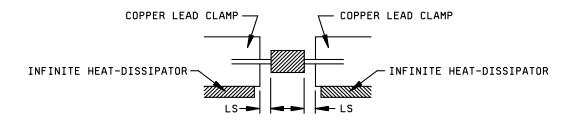

FIGURE 10. Mounting conditions.

5. PACKAGING

5.1 <u>Packaging</u>. For acquisition purposes, the packaging requirements shall be as specified in the contract or order (see 6.2). When packaging of materiel is to be performed by DoD or in-house contractor personnel, these personnel need to contact the responsible packaging activity to ascertain packaging requirements. Packaging requirements are maintained by the Inventory Control Point's packaging activities within the Military Service or Defense Agency, or within the Military Service's system commands. Packaging data retrieval is available from the managing Military Department's or Defense Agency's automated packaging files, CD-ROM products, or by contacting the responsible packaging activity.

6. NOTES

(This section contains information of a general or explanatory nature that may be helpful, but is not mandatory.)

- 6.1 Intended use. The notes specified in MIL-PRF-19500 are applicable to this specification.
- 6.2 Acquisition requirements. Acquisition documents should specify the following:
- a. Title, number, and date of this specification.
- b. Packaging requirements (see 5.1).
- c. Lead finish (see 3.4.1).
- d. Product assurance level and type designator.
- * 6.3 Qualification. With respect to products requiring qualification, awards will be made only for products which are, at the time of award of contract, qualified for inclusion in Qualified Manufacturers List (QML 19500) whether or not such products have actually been so listed by that date. The attention of the contractors is called to these requirements, and manufacturers are urged to arrange to have the products that they propose to offer to the Federal Government tested for qualification in order that they may be eligible to be awarded contracts or orders for the products covered by this specification. Information pertaining to qualification of products may be obtained from Defense Supply Center, Columbus, ATTN: DSCC/VQE, P.O. Box 3990, Columbus, OH 43218-3990 or e-mail vge.chief@dla.mil.

6.4 <u>Cross reference substitution list</u>. JANS level will no longer be built to MIL-PRF-19500/117. Devices in stock are acceptable provided the date code does not exceed the date of 8 September 1997. Devices required for space flight applications shall meet the requirements of MIL-PRF-19500/533. Existing supplies of parts can be used until existing supplies are exhausted. A PIN for PIN replacement table follows, and these devices are directly interchangeable:

JANS	JANS
superseded PIN	superseding PIN
1N6327	1N964B-1
1N6328	1N965B-1
1N6329	1N966B-1
1N6330	1N967B-1
1N6331	1N968B-1
1N6332	1N969B-1
1N6333	1N970B-1
1N6334	1N971B-1
1N6335	1N972B-1
1N6336	1N973B-1
1N6337	1N974B-1
1N6338	1N975B-1
1N6339	1N976B-1
1N6340	1N977B-1
1N6341	1N978B-1

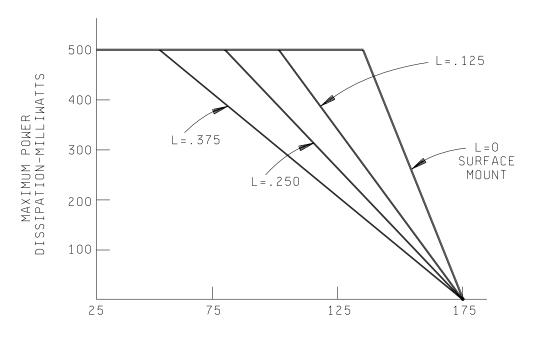

JANS	JANS
superseded PIN	superseding PIN
1N6342	1N979B-1
1N6343	1N980B-1

⁽¹⁾ Applies to "C" and "D" suffix versions also. Simply replace all "B" suffixes with "C" or "D" as applicable for correct PIN.

^{6.6 &}lt;u>Maximum power versus lead temperature</u>. Typical maximum power rating as a function of lead temperature for various lead lengths is shown on figure 11.

LEAD TEMPERATURE-DEGREES CELSIUS AT DESCRIBED LEAD LENGTH

Inches	Millimeters						
.000	0.00						
.125	3.18						
.250	6.35						
.375	9.53						

FIGURE 11. Maximum power versus lead temperature and lead length.

6.7 <u>Changes from previous issue</u>. The margins of this specification are marked with asterisks to indicate where changes from the previous issue were made. This was done as a convenience only and the Government assumes no liability whatsoever for any inaccuracies in these notations. Bidders and contractors are cautioned to evaluate the requirements of this document based on the entire content irrespective of the marginal notations and relationship to the last previous issue.
