General Description

The UM348X series is a mask-ROM-programmed multi-instrument melody generator, implemented in the CMOS technology. They are designed to play the melody according to the previously programmed information and capable of generating 16 songs with 3 instrument sounds, the piano, the organ and the mandolin.

The devices also include a pre-amplifier which provide simple interface to the driver circuit. The UM348X series is intended for applications such as toys, door bells, music boxes, melody clock/timers and telephones.

Functional Description
Oscillator & Control Circuit

The resistor R_1 & capacitor C_1 are connected externally to set the frequency at 100 KHz. Addition of R_2 (shown is application CKT) in series with input inverter is to make the circuit insensitive to the variation of supply voltage. Under the stand-by condition (CE is Low) the operation of the OSC is inhibited. As soon as a high level signal is applied to the CE terminal, the circuit starts oscillating. Since the OSC frequency is used as a time base of the tone, rhythm and tempo generators, its accuracy will affect the quality of the melody.

Modulator Circuit

The tone signal and the timbre signal are put through

the modulator circuit. The output waveform is shown in Fig. 1 and the modulator circuit shown in Fig. 2. Proper selection of C_2 , R_2 can produce envelopes of desired charging and discharging time.

Pre-amplifier

The pre-amplifier circuit is shown in Fig. 3. Feedback resistor R_4 must be connected to obtain proper bias of pre-amp stage. In the stand-by state the pre-amp is disabled, and OP1 is pulled up to V_{DD} . OP2 is pulled down to V_{SS} .
